Check out Ham Radio Outlet. They have a page in their catalog (.pdf download)
that has quite a few mounts.
Glenn, KG7IL in Renton

From: Tinker <speed_buggy@hotmail.com>
Message-ID: <86f18i$2cd$1@ins23.netins.net>
Source record: 21396

Hello everyone,
I just got a new computer and guess what ? I forgot to save my favorites folder. Anyway, I had some really good cb mod pages and now I can't seem to find the ones that I had.
What is your favorite page for mods ?
Thanks,
Tinker

BTW I have an old junk Cobra 19 ultra that I would like to do a modulation mod , so it would be very helpful if the page that you sent me would have this mod on it. I know, a Cobra 19 ultra . It won't stand a chance up against my two 2950s but it was free and I want to play with it.

Thanks again

I don't watch TV except the wx channel before I start work in the morning. I work outside so its kind of important.

> Get up a half-hr early

I'm already up at 4:30. You get up half an hour earlier.

> Stay in the office during lunch-break

I'm a field Tech. I eat in the truck on the way to the next site if I eat at all. I visit the office on Monday morning to see my e-mail and file my travel vouchers.

> Come up with some other excuse, iow.. ;)

Why are you liberals always trying to decide what someone else should do with THEIR time and THEIR life? I've got enough problems without you inventing more for me.

Now here are my demands of you.

1. Join the Republican Party. Actively support your local Republican candidates.

2. Get up half an hour early and telephone friends, neighbors, and talk shows and tell them about how the Republicans want to get government out of their pockets, homes, and lives.

3. Spend 30 minutes of your your lunch hour handing out Republican Party brochures and encouraging people to register and vote.

After you have done all three, you will be allowed to post on rra.policy using your real name and callsign.

3571. 7414 voltage help

Newsgroup: rec.radio.cb
Date: 2000-01-23 00:00:00 UTC
From: prozac 625 <Only-Dave_Mades@BayshoreNetwork.Com>
Message-ID: <PUGi4.2881$t_.67434@news.rdc1.nj.home.com>
Source record: 21420

I have three red neck identifiers that were given to me because they don't work. There in a 7414 that serves two purposes. One is to reset a 4017 counter when TX goes to ground and the second purpose is a one shot multi vibrator that creates the clock pulse for the 4017 counter.

The problem seem to be that they are feeding the whole board with 12volts. The 7414 schmit inverter is getting very hot and burning out very fast. I can very easily fix this problem but how do the rest of the million red necks out there stay working?????

Yep, it is true. The discussion over the FCC's amateur restructuring has now exceeded the number of posts for any other topic on this ng during the past 5 years, and has qualified for the Millionth Customer Award. For all the bitching that occurs here from CBer's griping about amateurs coming to this news group, you have been able to successfully whip this dead horse for a longer period of time than coax voodoo, enforcement of rules, and even my favorite, illegal amplifiers. Congratulations for this lengthy topic which has virtually nothing to do with CB. Next time someone posts a question regarding the best means of building a bird bath, don't jump all over him.

3574. Re: heavy duty alternators

Newsgroup: rec.radio.cb

Message-ID: <MFGi4.276$oc4.7019@insync>
Source record: 21423

Your analogy is correct, although a generator and an alternator work
entirely differently.

Yes, the voltage goes up, the current goes down.

However, with a Leece-Neville, you don't have to worry much about it,
because you bought a quality product.

It would be like buying a 2879 and running it at 100 watts all day. It will
last forever, because your running it at factory specs, although those that
have played know that little transistor can do 400 watts all day (peak).

If you simply can't find a good place, check out companies like ProFit, Gamber-Johnson, Panavise and others that specialize in mobile mounts. Some are like mecchano where you can custom build your own (usually ugly). Others, my favorite, allow you to mount three radios on one pedestal. Also makes it much more difficult to rip them off. :->

Body handling: HTML body converted to readable text

If you want a true half-wave with RG-58, the length will be 11.7'. This will accurately reflect the VSWR at the far end on your VSWR meter. With antennas, the ground resistance is high enough that 18ft will provide a good-looking VSWR. But, if you are using -other- gadgets in-line, I personally stick to the 11.7' runs.

Iam looking for some info on a Channel master 11 meter antenna.

I picked up one, but it will not tune up on 11 meters, I have took it apart and cleaned all the connections in it, coil at bottom looks good.

Does this antenna have to be mounted on a mast pipe at least a 1/2 wave long or can it be mounted to anything?

Here in London UK if you where stupid enough to install a CB in a car, should it be remotely visible the CB would be history before you would have had time to set your car alarm. I know from a number of bad experiences in the past. It is also impossible to leave an antenna on a car in this wonderful city of ours because the average moron thinks its really funny to snap it off and play soccer with it. Eventualy I had to resort to a K40 in order that I could place it in the boot of the car (I think you Americans call it a trunk) when I parked it. Anyway the theives got round that by stealing the bloody car (twice) and so now I don't keep a CB in the car anymore. And as for my car insurance don't even ask it was raised to about $1500 of your dollars per year. I started this hobby in the first place because it was cheap and fun. I think it would be cheaper to collect Picassos. I would welcome any comments on security or your theft experiences in the US of A

I was wondering why they say 18 feet for coax! That
indicates they have not considered the velocity factor of
the coax!.

I have the instructions that come with it and plus the 4017 is a 12 chip.
There is no resistance to the 7414 and there is no regulator. Oh and what is
the difference between 7414 and the 74hc14 is it just the high speed of the
hc model? I know the 7414 cuts out the noise of the 7404 witch is not a
cmos. All info is helpfull since I dont play with ICs often. I don't even
know why I'm playing with thes cheap ass toys.

Greetings!

While Dancing with the Mouse on Sat, 22 Jan 2000 22:59:46 GMT, the
Modem interrupted with an MNI from ""rufus279" <c279m@yahoo.com>", and
the MotherBoard buffered this to Video RAM:

:+> Thanks for the info Andy!
:+>
:+> I still have a few questions thought. I cut the Q207 and believe I found
:+> that trace, it should have looked like somebody scored it with a knife,
:+> right?

Yes, thats the one that needs to be "solder bridged" over.

:+> As far as the wire jumper between RV202 and the audio amp chip, I can't
:+> find
:+> such a wire. What color is it? Any info on that would be great as well.

It's the one nestled between the Audio Amp chip, and is at the edge of
the circuit board on top, right next to the audio chip - it's a small
plain tinned wire jumper. About 1/4" or 1cm in length - real short
guy. Runs from the edge, along the side of the audio chip to complete
a ground that the black mic ground wire that is soldered to the edge
by the squelch control.

The ground can then be supplied by the section that you can take care
of the solder bridge with.

Removing it does help take care of a ground loop - there is
another jumper on the other side of this MOD pot that is
in-between the Squelch control, RV201, and RV202, that should
be left alone.

This jumper and another one right next to it are to be left
alone! These two jumpers combined with the other one cause the
ground loop problem. Remove the short one right by the audio
chip, to remove the loop and squeal problem and restablish the

main ground to this section.

I'm describing this to you so you can locate the ones
that should be left alone and a little description of their
purpose to help orient you to the right location.

The shorter of the two, operates the Mod Pot VR202 and the
other supplies ground for parts closer to the center of the
board. [These are the ones closest and right next to RV201.]

Back to that cut trace....
When you short out the gap, the ground is taken care of in
this section. Removing the loop by removing the small jumper
next to the audio chip, it's located towards the front side
of the radio, or with the audio chip -even though it's
oriented printed side away - facing you, the jumper is on it's
left side, towards the front. Doing the jumper mod and the
removing of the other jumper you'll find it less likely
to squeal - even with a power mike and a little quieter in
the noise level.

:+>
:+> Finally I did a small search for that L303, but can't find it. Where
:+> exactly is it?

Look at the board, by the Driver, Q303 - the 2314 Driver, the part
looks like an oversized resistor with a green body. It's color banding
is Red Red Gold Gold, signifying a 2.2uH choke. It's inbetween the
blue bodied 1 watt 10 ohm power resistor, and Q303.

I cannibalized another similar labeled part from an older
Cobra 19 laying around for parts.

:+> And if you can, please post the remaining mods you have for this radio.
:+> I
:+> have found the 120+ channel mod already and have that done. Works great.
:+>
:+> Thanks

Well, with all this typing, I'd rather just do up a HTML page if I can
find someone to host it...

Regards!
:+> Andy <+:

The 74%% series is 4.5 to 5.5 volt power input.
The other chip you stated was a 40%% series with a input voltage of 3 to 18 volts.
I would say the OEM hex inverter chip was a 40%% series.
Somthing like a 4069 or somthing.
If you can not find a 40%% series chip that replaces the 7414 just put in a 7805
reg to run it and any other 74%%,s on the bord.
Or just run all the IC,s of the the reg and be dun with it.
If the 7805 get,s hot just put a heatsink on it.

Greetings!

CB, Citizens Band.

CB's - plural for number of pieces of radio equipment known to
introduce yourself to neighbors that have no clue and desire, to hear
your overdubbing of the Football games.

If you're referring to Citizens Band, it's plural - referring to the
citizens of the country that are entitled to use the band.

While Dancing with the Mouse on Sat, 22 Jan 2000 17:11:17 -0800, the
Modem interrupted with an MNI from "mickey <mickey@mickeys.co.uk>",
and the MotherBoard buffered this to Video RAM:

it sounds like you need one of those all in one everything in the mic cb's.
i don't know if they make them in the U.K. or not but it would be a start. i
don't like the am-fm-cb antenna adaptors but it sounds like this would be in
order too.
another thought, if you have them in the U.K. would be a handy talkie with a
magnet mount antenna and a cigarette lighter adaptor and a small bag to carry
it in and out of the car with.
if nothing else works, tint your car windows and wire a shot gun to the door.
good luck.
jeff

Don't think were immune to car theft here. Unfortunately our courts donâ€™t deal with criminals like yours do I.E. lock them up and throw the key away.
Oh no not in this country. No we hear about the broken homes they come from, and now there's a whole new industry growing up around these criminals. They are social workers and bleeding heart do gooders. This country once ruled the world look at it now, a complete and utter shambles. Furthermore vote for Prime Minister Blair and his lunatic left wing government "are you sure" I'd rather stick pins in my eyes. Since that clown has been in power we now pay six yes six of your dollars for a gallon of gas. If you want to double the value of your car in this country just take it to the gas station and fill it up then go home and re-morgage your house to pay for it.

.50 Desert Eagle
9mm Glock
9mm Ruger
12 Gauge (semi)
20 gauge (pump)
30-30
30 O6
35 Remington

Thats my version.... <g>

If they are stealing your car, then what security can you offer? Other than an alarm with started disable. One with a Normally Open relay for the starter disable...

This would probably lower your insurance... (Im assuming) and get the club, the steering wheel locking device.... I have a Clifford alarm with the above, and a steering wheel club that has a remote also (this all for when I lived in Philly)... the club I used had a remote that would enable and disable (so far so good...) an ear piercing 140-150dB squeal like siren, and a shocking device..... One thing I thought about it taking two relays... and make circuitry that when they actually BREAK your window... have two pumps with safety valves shoot gas from a small cooking grill sized propane tank, and somehow have it light it (probably with a piezo electric igniter) but have these metal tubes shoot up from under the car towards where the passenger and driver get in (under the door in other words).... this would teach the thief a lesson.... albeit it would probably cause a lawsuit... but in some peoples (sick) mind it may be worth it... heheh

mickey wrote in message <1ad5cfac.72e12e9f@usw-ex0107-041.remarq.com>...
|I was reading with interest the article by K Sprinkles about installing
|a CB in a car.
|Here in London UK if you where stupid enough to install a CB in your
|car, should the rig be remotely visible it would be history before you
|would have had time to set your car alarm (even though CB almost
|perished years ago in this country). I know from a number of bad
|experiences in the past. It is even impossible to leave an antenna on a
|car in this wonderful city of ours because the average moron thinks
|itâ€™s really funny to snap it off and play soccer with it. Eventually
I
|had to resort to a K40 in order that I could place it in the boot of
|the car (I think you Americans call it a trunk) when I parked it in the
|evenings. Anyway the thieves got round that by stealing the bloody car
|(twice last year) and so now I don't keep a CB in the car anymore. And
|as for my car insurance don't even ask it was raised to about 1500 of

|your dollars per year. I started this hobby in the first place because
|it was cheap and fun. I think it would be cheaper to collect Picassos.
|Its about time prime minister Blair reinstated the death penalty in
|this country for low life scum that steal other peoples property. There
|would be a line a mile long outside the jails with people only to happy
|to pull the lever that opens the trap doors. I would welcome any
|comments on security or your theft experiences in the US of A.

Well Jeff I like your idea of the magnum and the colt 45. However if you where caught carrying a spud gun in this country it would be "goodnight Vienna" for about 5 years. But should some 15 year old yob beat the cr*p out of a 96 year old lady thats not a problem for our courts, they send them off on a $10000 safari for about six months in order to re-habilitate them. Then two weeks later the little toe-rags are back in court again.

it sounds to me like who ever tweaked your radio either tampered with or overran your TVI filtering circuitry.
your radio might be right on frequency but, at the same time, it is probably also throwing out harmonics.
your antenna might be 1.0:1 on 27 mhz but it is way out of whack on the harmonic frequencies whish will show itself as high SWR, wasted power and angry neighbors.
get rid of the harmonics and your AWI light will go out, your efficiency will go up and your neighbors will calm down.
good luck.
jeff

does your truck have a fiberglass body?
if so, you might have to run a ground braid from the door side of the door hinges to the body side of the door hinges for a better bonded ground. any moving part makes a lousey ground. in fact, even if the body is steel, this wouldn't be a bad idea. when ever i install a trunk mount antenna on a car, i always ground the trunk lid to the car body this way.
the stacks wouldn't cause a squeal. if they were going to interfere with anything, it would be the SWR but you say this isn't the problem.
if the ground strap doesn't work, i would have a couple of .01uF disk capacitors installed inside the mic between the key line to ground and the mic line to ground.
this will bypass any RF that is feeding through your mic into the radio.
some radios already have these caps installed in the radio at the mic plug, some don't.
good luck.

That doesnt sound too good. Hell, Where I live in California, Most of
the people up here hardly ever roll there windows up during the summer
and when it rains the doors are unlocked. CB's in plain view,
Expensive car stereos' Laptops and all are pretty much in plain view
in the outlying city limits. People kinda get more secure in the city
limits when it comes to leaving stuff in there cars, but they still
leave the
doors unlocked and so on. I moved up here from living in the Bay Area
(200 miles south) and the Bay Area was a Hell Hole. Robberies every
night, murders, rapest, child molesters, god awfull traffic jams,
Police were DICKS, must I continue?

Ha Ha, I would bet that over half of the Freeband operators are licensed amateurs, if you listen to their conversations, in fact the big thing that I myself feel will someday come to a head is that the number of people that are on Freeband world wide I think far outnumbers ,licensed operators, personally I'd like to see it left alone , if you don't like , or want to use it don't, but keep in the back of your mind, the issue of freedom.like what if y2k, or the Chinese got real crazy, or lets say,some other issue that the military , [who's] ?,could come knocking on doors , confiscating , your personal weapons , right off the registration lists and radio gear , right off the governments lists,this is why it appalls me that so many good Americans get misled over certain freedom issues,here in the Pacific Northwest we have seen peoples rights violated and there families murdered,over personal and religious beliefs,yes the press trys to cover every thing with radicals or some sort of goose steppers,but not the case,I hope that this gives some of those that are first to criticize and to be snitch's a bit more to ponder over,and no this wasn't meant to provoke a tirade from the left wingers liberals,thank you

Well sir If I was to leave my car window open, the door unlocked or anything inside the vehicle that was worth stealing (or not even worth stealing), not only would everything in the car be ripped off, not only would the car be ripped off, I would proberbly arrested by the police and sent to the local lunatic hospital for wasting police time (which in this country is a CRIMINAL OFFENCE). Who would be a Londoner, I'm pretty p*ssed off with place,in fact I'm surprised the Tower of London is still there!!!!!

I feel your pain. I have put Wilsons on the balcony, longwires
out the window at night, however the only thing that works is
being in the mobile. One night, I took a small battery and the
Wilson up to the roof. Placed the Wilson on an air conditioner.
Hooked battery and Wilson up to radio. From the roof of a six
story building it worked real good.

3624. Re: Silencing a noisy alternator ?

Newsgroup: rec.radio.cb
Date: 2000-01-23 00:00:00 UTC
From: Jay <jay123a@qnet.com>
Message-ID: <388BA25B.D697E99@qnet.com>
Source record: 21473

Hello SK: The alternator diodes turning off can generate quit a noise.

If the radio manufactures did their job, the receiver would have proper filleting and now allow this type noise to be heard. I had some alternator noise in my radio, and made a brute force 12 VDC power line filter, but still had the alternator noise. The battery died at Thanksgiving holiday, and bought a Sptecrum battery, noise gone.

Another thing I've head that works sometimes is to insulate the radio from the vehicles ground. Mine is mounted on the dash, and is already insulated.

I'd also make sure that there is at least a 8 or 10 gauge wire from the alternators ground mounting point on the engine block, to the vehicles battery negative (-) terminal. This will reduce current climbing all over the vehicles body, from the alternator to the battery.

A noise reduction type capacitor, .1 or 1uF placed at the alternator, bypassing the output terminal to Ground, may or may not help suppress the alternator noise. But worth a try. I've seen ignition coil noise suppression capacitors used for this function.

I had a friend years ago deliver his Ford truck to me and said to keep it until the F&^%#&* alternator noise is fixed. Well most cheap CB radios, are just that, cheap. Manufactured in the numbers of thousands. They didn't have a corporate meeting in how to make a noise free radio. Just a meeting on the profit vs cost, and get the political incorrect fellows. A lot of times the alternator noise comes in from the receiver. A 88mH torrid core and a .1uF capacitor, in a parallel take circuit, in series with the coax center wire, mounted in a aluminum box, will filter out or significantly reduce the alternator noise.

Hope this helps, and 73's

Its not free now but you people sure as hell are working on it.. If I could pass the test anyone could..
I aint real good at code but I passed the thing without bitchin.. Its what I had to do.. I passed the written because Its what I do for a living but there are lots of guys that pass both.. Why? They thought ham radio was worth working for... My wife passed her test for no code tech and has been working on the code.. Now she said "their going to give the thing away.. all that work down the drain." I told her its not down the drain but there will just be fewer real hams and a lot of free loaders.. After a while even filling out an app. got to be too much trouble for the CBers.. pretty soon they will be getting rid of the written too.. Do you now what that will make us.. CBers.. IT IS RADIO WELFAIR.. You dont want to work for it.. Hey you have a right to have it.. I want it FREE! Well if we make it so easy what have we got.. NOTHING.. not a damn thing! Like America its going to Hell in a hand basket..
dumb it on down.. Packet is going and RTTY because they cant read.. Give them the paper..

3635. Silencing a noisy alternator ?

Newsgroup: rec.radio.cb
Date: 2000-01-24 00:00:00 UTC
From: Southern Kiwi <p.mccaul@spamsucks.ihug.co.nz>
Message-ID: <86fsk7$p64$1@news.ihug.co.nz>
Source record: 21484

Set-up - Mitshibishi L200 double cab, wellside, petrol motor
Uniden Grant
Vertical whip antenna mounted on the rollover bar in the centre of the truck

The noise is not coming up the power line as I tried a rf capacitator on it
and it made no difference.
I am pretty sure its the alternator as when idling I get static bursts (from
2 up to strength 7), and when I rev it stays around the strength 7.
How do I quieten the alternator, what goes where?

Any ideas appreciated
Thanx

Is the antenna properly grounded? Is the radio hard-wired and not
just plugged into the cigar lighter socket? How's the SWR?

I used to leave my car doors unlocked because if they are going to steal something out of my truck, I wouldn't want to have to pay for the broken window as well. Now that a leading car battery manufacturer made a battery that you can disable by means of a remote operated realy, I don't have to worry about the truck going away. And I leave the sliding window in the rear unlatched and cracked open to solve the broken glass problem.

Coax length doesn't matter! Fifty Ohms is all you need to be worried about.
That is unless you have poor Rf grounding and your coax is a resonant length.
Then it becomes in effect a second antenna which totally makes your swr climb.
I have run mobile rigs with 7' of coax in my mobile without a single swr
problem. In fact the swr match was 1.1:1.

No, I keyed the Rock's mobile, they had limited the amount of antennas to
3 or less for this break. So I had to leave the 5 eyed beast at home. And
keyed Rock's Ranger. The bad part was every class was won from the right
side and if you didnt get there first you had to go left side and were all
ready at a disadvantage.

> Why on earth would it?What happens on april 15 that effects these
>miscreants?

with the changes comming in the ham licenseing structure on april 15, some of we "miscretants" might just go for our ticket but i doubt it because there isn't very much intelegent life in that wasteland. no one wants to be the first to set foot in there but if, by some coinsidence say, 1000 "miscreatence" were to get their ticket on the same day, maybe the SETI project will happen upon this activity and report it to the newspapers and more will go legal and explore.
until then, we will just have to be content with scanning that part of the spectrum and wait for a blip of intelegent life to come acress the screen.

The SWR is good 1.2 - 1, the power lead comes from the ignition switch and
the antenna is bolted to the roll bar which is bolted to the chassis

Sir:

In November, 1999, you made slanderous accusations against a company I am affiliated with--which is not fractenna---in which you state that you know unhappy customer(s) for which we did not do right. When asked--both publicly and via e-mail--who said customer(s) was (were), you were evasive. It was clear that your intent was purely defamatory in nature, with no basis.

Again, the same with the above 'analysis'

Points to correct your false allegations:

1)Obviously if I was not the moderator, I would not have posed the invitation. The size of the lists indicate that almost 400 subscribers didn't get 'scared away' --despite your attempt here to do so;

2) I invite anyone who has been unhappy with the moderation--that is if it has shown bias; non-objective decisions; lack of well-stated basis for expunging posts; and so on-- to publicly state so and state why and give my alleged offense . I will GLADLY make them moderator!;

3) Your approach to CB radio entails illegal use of high power. I do not advocate your illegal use of the radio spectrum and told you so. I tell you this again.;

4) Analysis of USENET reveals a non-trivial number of folks on this NG have a deep interest in antennas. If they were not welcome to pursue such topics the invitation would not have been extended to them. In fact, about a dozen subscribers from this NG have joined today.

As to looking at my posts on RRAA--why not? If you--Mr. 10Kw 'Jesus'-- had attempted to read and understand them you would learn some insightful info on new antennas.

Welcome to all on the lists!

73

>the ground resistance is high enough that 18ft will provide a good-looking
VSWR.
>But, if you are using -other- gadgets in-line, I personally stick to the
11.7'
>runs.

That's the 1st time I've heard someone actually try to figure in the 'velocity factor' of the coax into the equation... most just say cut the coax to 1/4 or 1/2 wave lengths.

Given that 468/f (in MHz) = half wave length

Let's see now... 246/27.MHz = approximately 108" for a 1/4 wave (or 9.04 feet) meaning a 1/2 wave equals about 216" (or 18.08 feet)

Figuring in a velocity factor of 66% for RG8.. (18.08 X .66) = 11.93 feet or approximately 143" for 1/2 wave, or 5.96 feet and 71.5" respectively for 1/4 wave length.

Now that you've run out and cut your coax into multiples of 1/4 or 1/2 wave lengths.... WOULD YOU CARE TO EXPLAIN to anyone here how MY multibanded rig works in MY car with only 6 feet of coax between the rig and the antenna??? (I DO NOT use a matching network) I carry 8 different antennas: 75, 40, 30, 20, 15, 12, 10, & 11 meter whips... Each is designed to fit onto the same bayonet-type mount on the trunk. Each is also individually tuned for best SWR (1:1 to 1:1.6 nominal) (BTW... I also run a 6 band vertical antenna at home... about 70 feet of coax... ohhh, and THAT coax has a 10 turn coil of Coax at the base of the antenna to decouple the coax from the antenna) Are you suggesting that it's prudent to run out and change the length of the coax each time I change bands??? I hope not... that would just take all the fun out of radio!

Yes...lengths of coax CAN make a difference at an SWR meter located at your radio... but you are disguising the real mismatch that is causing the SWR to begin with... the one at the antenna.. moving those standing waves in relation to your radio does not stop them from being wasted energy. Fix the antenna (make it = 50 ohms resistive load at resonance) and coax length won't matter... unless of course it's an exceptionally long run where losses add up.

IT'S NOT HOW LONG IT IS THAT COUNTS...
IT'S WHAT IT'S CONNECTED TO!

Parts radios as "new" as this are scarce in this part of the country.
Even if I did find a Cobra CB w/ the same LED readout, I do concede
that that readout may just as well be bad also. However, I've been
around long enough to know how to test LED readouts.

I'll e-mail you, as well as wait and see if anything else turns up
here.

In _The_Book_Of_Wireless_, Frederick Collins, 1915 we see that the code speed was just 5 wpm. (Of course, back then, code was the only mode in use -- you HAD to learn it AT SPEED or else you didn't communicate with anyone.)

Here are the other requirements:

Recognize the official KEEP OUT signal and distress call.

Be knowledgable of the International Radio-telegraphic Convention in force and Sections 3, 4, 5, and 7 of the Act of Congress of August 13, 1912.

Take a seven-question written exam covering:

1. How to make a diagram of the transmitting and receiving apparatus
2. How the transmitting apparatus is made and how it works
3. How the receiving apparatus is made and how it works
4. The International regulations for wireless communications and the U.S. wireless laws and regulations.

That written exam was an essay-type test. As the goverment examiners were fond of saying back then, "What you fail to say, you don't know."

11.7'
>runs.

That's the 1st time I've heard someone actually try to figure in the 'velocity factor' of the coax into the equation ... most just say cut the coax to 1/4 or 1/2 wave lengths.

Given that 468/f (in MHz) = half wave length

Let's see now... 234/27.2MHz = approximately 103" for a 1/4 wave (or 8.6 feet) meaning a 1/2 wave equals about 206" (or 17.2 feet)

Figuring in a velocity factor of 66% for RG8.. (17.2 X .66) = 11.35 feet or approximately 136" for 1/2 wave, or 5.67 feet and 68.1" respectively for 1/4 wave length.

Now that you've run out and cut your coax into multiples of 1/4 or 1/2 wave lengths.... WOULD YOU CARE TO EXPLAIN to anyone here how MY multibanded rig works in MY car with only 6 feet of coax between the rig and the antenna??? (I DO NOT use a matching network) I carry *8* different antennas: 75, 40, 30,
20, 15, 12, 10, & 11 meter whips... Each is designed to fit onto the same bayonet-type mount on the trunk. Each is also individually tuned for best SWR (1:1 to 1:1.6 nominal) (BTW... I also run a 6 band vertical antenna at home... about 70 feet of coax... ohhh, and THAT coax has a 10 turn, 8" coil of
Coax at the base of the antenna to decouple the coax from the antenna) Are you suggesting that it's prudent to run out and change the length of the coax each time I change bands??? I hope not... that would just take all the fun out of radio!

Yes...lengths of coax CAN make a difference at an SWR meter located at your radio... but you are disguising the real mismatch that is causing the SWR to begin with... the one at the antenna.. moving those standing waves in relation to your radio by legntheningor shortening your coax does not stop them from being wasted energy. Fix the antenna (make it = 50 ohms resistive load at resonance) and coax length won't matter... unless of course it's an exceptionally long run where losses

add up.

IT'S NOT HOW LONG IT IS THAT COUNTS...
IT'S WHAT IT'S CONNECTED TO!

Note: posted to both radio.shortwave and radio.cb

Assuming cell phones are out of range.
What is the optimum transceiver for emergency only use on remote rural roads while solo bicycling?

Options I have seen: (mostly at www.cabelas.com)
- Midland 40 channel CB with weather bands
- Any of several VHF handheld systems.
- Marine Band? (probably only good near coast)
(what kind of range would they have?)

I assume that anywhere near a highway the emergency channel on a CB would be best because of truckers. Probably would need to add an aftermarket antenna. Could VHF be a better choice.

How about a model that could be modified for illegal power levels (since it will ONLY be used in a life threatening emergency)?

Is the chance of being heard so low that it is not worth the bother?

Might a transmitter in use have some deterrent affect on attack?

Thank you

Since by your own name sake you are an authority on the subject:

Here's a little experiment for you.

1. Take a 18 foot length of RG58.

2. Connect it to a variable signal source of 26 MHZ with a 50 Ohm calibrated dummy load connected at the other end. Do you get a 1.1:1 VSWR. Likely not!

3. Slowly increase the frequency and watch the VSWR. You will find that at some point the VSWR will come to it's lowest value and then start increasing again. You have found the resonant frequency for that length of coax. There will still be some loss since 1:1 is only theorically achievable. But the lowest may be acceptable, say 1.2:1.

4. Now cut-off 2 feet and repeat steps 1 thru 3.

Did you see it? THE RESONANT FREQUENCY IS NOT THE SAME.
This means that when you use an anti-resonant piece of coax in your antenna system, you are still losing output power in the coax due to impedance mismatch loss ON YOUR DESIRED FREQUENCY. Even though your expensive VSWR meter is telling you everything is OK. Connect an Wattmeter and run the exercise and you will be able to see that you are emitting maximum output from your antenna. WHEN AT RESONANCE.
This means, you should know, that your coax characteristic impedance is truly 50 Ohms,
But only at your desired Frequency or a harmonic thereof.
Connect this coax to an antenna with a different characteristic impedance and you have loss, OK!

I can't convince you. Run the exercise and convince yourself!

Cell Phone of course would be my first choice, since it would be emergency only, the new satellite phone would be a second choice, but very expensive but with continues world wide coverage. Citizen Band is a good alternative near a big city, but it too becomes spotty in rural areas. Although it requires work, I would consider getting a Amateur Radio Technician license. No code test is required and many clubs offer classes. Due to many repeater like public service (police) the coverage for the two most popular bands (2 meters which is next to the VHF hi police band and 70 cm which is next to the UHF police band) is excellent. I heard mixed reports about VHF Marine. Good near any boating area including inland but again become questionable away from that area. GRMS in the UHF band might be something to look into, I am aware of what the service is, but not how popular it is. Finally, a ELT transmitter is also something to check out. Generally used for crashed airplanes or sinking boats and ships, I also know they have been used by skiers.

Good luck

Bill try this exercise!

1. Take a 18 foot length of RG58.

2. Connect it to a variable signal source of 26 MHZ with a 50 Ohm calibrated dummy load connected at the other end. Do you get a 1.1:1 VSWR. Likely not!

3. Slowly increase the frequency and watch the VSWR. You will find that at some point the VSWR will come to it's lowest value and then start increasing again. You have found the resonant frequency for that length of coax. There will still be some loss since 1:1 is only theorically achievable. But the lowest may be acceptable, say 1.2:1.

4. Now cut-off 2 feet and repeat steps 1 thru 3.

Did you see it? THE RESONANT FREQUENCY IS NOT THE SAME.
This means that when you use an anti-resonant piece of coax in your antenna system, you are still losing output power in the coax due to impedance mismatch loss ON YOUR DESIRED FREQUENCY. Even though your expensive VSWR meter is telling you everything is OK. Connect an Wattmeter and run the exercise and you will be able to see that you are emitting maximum output from your antenna. WHEN AT RESONANCE.
This means, you should know, that your coax impedance is truly 50 Ohms But only at your desired Frequency or a harmonic thereof.

I can't convince you. Run the exercise and convince yourself!

In case you missed it earlier:

Here's a little experiment for you.

1. Take a 18 foot length of RG58.

2. Connect it to a variable signal source of 26 MHZ with a 50 Ohm
calibrated dummy load connected at the other end. Do you get a 1.1:1
VSWR. Likely not!

3. Slowly increase the frequency and watch the VSWR. You will find that
at some point the VSWR will come to it's lowest value and then start
increasing again. You have found the resonant frequency for that length
of coax. There will still be some loss since 1:1 is only theorically
achievable. But the lowest may be acceptable, say 1.2:1.

4. Now cut-off 2 feet and repeat steps 1 thru 3.

Did you see it? THE RESONANT FREQUENCY IS NOT THE SAME.
This means that when you use an anti-resonant piece of coax in your
antenna system, you are still losing output power in the coax due to
impedance mismatch loss ON YOUR DESIRED FREQUENCY. Even though your
expensive VSWR meter is telling you everything is OK. Connect an
Wattmeter and run the exercise and you will be able to see that you are
emitting maximum output from your antenna. WHEN AT RESONANCE.
This means, you should know, that your coax impedance is truly 50 Ohms
But only at your desired Frequency or a harmonic thereof.

I can't convince you. Run the exercise and convince yourself!

You probably don't have the equipment to do this right but:

Here's a little experiment for you.

1. Take a 18 foot length of RG58.

2. Connect it to a variable signal source of 26 MHZ (try using you
radio) with a 50 Ohm calibrated dummy load (if you can borrow one)
connected at the other end. Do you get a 1.1:1 VSWR. Likely not!

3. starting a channel 1, Slowly increase the frequency and watch the
VSWR. You will find that at some point the VSWR will come to it's
lowest value and then start increasing again. You have found the
resonant frequency for that length of coax. There will still be some
loss since 1:1 is only theorically achievable. But the lowest may be
acceptable, say 1.2:1, 1.5:1, etc,.

4. Now cut-off 2 feet and repeat steps 1 thru 3.

Did you see it? THE RESONANT FREQUENCY IS NOT THE SAME.
This means that when you use an anti-resonant piece of coax in your
antenna system, you are still losing output power in the coax due to
impedance mismatch loss ON YOUR DESIRED FREQUENCY. Even though your
expensive VSWR meter is telling you everything is OK. Connect an
Wattmeter and run the exercise and you will be able to see that you are
emitting maximum output from your antenna. WHEN AT RESONANCE.
This means, you should know, that your coax impedance is truly 50 Ohms
But only at your desired Frequency or a harmonic thereof.

I can't convince you. Run the exercise and convince yourself!

I used to have a 74 Sportster 1200, but I got to big for it. Im 6'3"
250lbs and I looked bigger than the bike. I was thinking of getting
another but this time it has to be an older Fatboy. I dont have a 4x4
yet. I usually go Wheelin' with a friend of mine that has a 74
Plymouth Trailduster (Same as a Dodge RamCharger). I also hope the BBS
goes back up. I currently reinstalled everything since it went down,
had to use a friends monitor to do it, and got a whole new setup on
it. You live in the area?

Assuming cell phones are out of range, I dont think a CB would do you much good either. I would concider the cell phone over all but the price is a little over for what you want it for, so you should concider getting your ham license and get yourself a 2 meter HT. I find that anywhere I go, I can always find a 2 meter repeater that I can get into.

I think I would experiment with a simple wire vertical for local,horizontal for dx,possibly made out of small coax or telephone wire,and disguise the heck out of it,under eves,in crevasses,etc.,messed around here with one of the pre made coaxial antenna's forgot by whom, it has suction cups on it for window mounting,it came with a Beartacker 7 mini scanner,din connector on it ,used to stick it on the china cabinet behind my chair and talk on the hand held to friends a couple miles away,also just being silly one time,stuck a little Willie mag mount on a bare set of bed springs in the bedroom adjacent to my shack,couldn't darned believe how well that worked,same with stuck in the middle of my large chest freezer

I also have had to deal with the exact same circumstances, what i did was i put a 10 meter dipole in my 3rd floor closet, and i went out and bought a vectronic's 300 watt antenna tuner, put it all together at BAM have been satisfied since. I must say that it does not get out as good as an outdoor, BUT i get a 35-40 mile range with a stock tram D201-A base no linears needed, another idea is if you have a fireplace, shove an antron 99 up the chimney .... it does work well, i could'nt do this cause i use my fireplace,.....wish you luck.....Frank in CT

This post is generally aimed at those who bitch too much....

Ham Radio was dumbed down (In your terms) before anyone out here got there ticket and now everyone wants to bitch... Only ones dumbing it down are those that complain and say it will be like CB or say that CB'ers are gonna invade the bands. Get real!!! You keep speaking garbage like that and it will eventually happen and you would have ruined ham radio for eveyone. Could you live with that?

The activity of the FCC restructure hasnt even hit the CB bands in my area yet. If it has, I dont hear it on mine...Only 2 other people I know on the CB band which are Hams as well know about it. A few other CB'ers I know that I talked to on the phone could care less about the ham bands. They like CB the way it is and dont even want to hear about ham radio. They still think The ARS Sucks.

Now, I am a no code Tech so you know. I, before the news, wasnt even interested in code. Now, I am practicing every day and night so I can get my 5 wpm and join those of you on the HF bands. If you dont want to talk to me there or on UHF/VHF, fine, so be it. Some one will talk to me or pound a paddle with me. You will not be missed one bit by me and alot of other users, Including Generals, Advanced, and Extra Class operators.

If you decide to have a temper tantrum like a child and want to sell your gear and leave ham radio for good, I got a few hundred bucks to blow on some used equipment.

We all know you won't sell it because of the news. You will put it away and then come back after a year or 2.

as a fireplace person i must tell you this isnt a good good idea at all unless you are never gonna use the fireplace. if its a masonry only unit you could get away with what you describe but keep in mind some firplaces use metal chimneys and would really affect an antennas SWR. just dont let any inspectors see your antenna this way.

I ahd good luck with an Inverted-V dipole on my livingroom wall.
I got a real nice signal out to about 30 miles on stock power.
Highly directional though. Mine went east-west.

Ahh ok, Thanks for checking it out. I just put the page up last night.
I got tired of the other free sites posting there banners where ever
they wanted too. The 4x4 page has suffered from the owner of the club
not submitting news and stuff and that is why its not very appealing.
What channel you talk on? do you go by Sasquatch on the radio? Maybe
one of these nights I'll hear ya and give ya a shout since night DX
give me a good shot into northern Oregon and all of Washington.

The real pity is, they could! Because it isn't THEIR ham radio any more. It has now evolved to something else other than what "they" had, so it can't be REAL ham radio! They don't care what happens now...

The great thing, that's fine and I hope we never, ever become as narrow sighted as them. Please, everyone who is a "young" ham, or even an "older" open-minded ham, please let's all remember these people when it's our turn to experience change! Let's remember this and conduct ourselves in a much more open minded way.

I agree, but if he lives in a place far from a repeater, VHF, and UHF are also out of the question. The range of a simplex VHF/UHF radio is no better than a few miles at best, so forget about autopatch also. If you do get your Tech licence, i'll be a boost, but no garentee of a good contact. What I say is buy or borrow someone scanner, and listen for repeaters in your areea. There are many repeater groups that offer internet access. Try to find one that may be in the area you may be in, and email them and ask them, what is the range of their machine.

Good luck

3729. Any mods for a TRC 217 handheld?

Newsgroup: rec.radio.cb
Date: 2000-01-24 00:00:00 UTC
From: moisesny@aol.com

I just got myself an oldie, but a goodie, a TRC 217 40 channel walkie talkie.
I wanted to know if there are any mods for this radio.

Thanks

Prozac, this group is here to learn and exchange information about the hobbie. Why are you here? To brag about how much money you got and how much material things you posses? There's more to it then that. We just want to learn, and remove the hidden vale behind why his amps and others are so great and cost so damn much. If I really wanted to infringe on copy rights I would just go buy a box and dissect it. That's one thing I don't hear Hams crying about, they don't say "this is usually not free info." They share there knowledge so they can improve and enjoy there hobby together to the fullest. Besides, how many people have the drive to take this "secret" info and start building there own amps? A very small percentage, have the WILL to spend countless hours, dollars, and hard aches to achieve building there own equipment. And if so great, the competion only makes price fair to the consumer. How much have you gained Prozac here in the group technically? Yes you know a few catch words, and know what parts is needed to put a mobile station to gather but, when it comes down to the competition edge do you have the KNOW HOW to put it all to gather, tune it, and make it work? Or are you going to reach down in that pocket book and buy your way to stardom? thats what I thought. Hehe, im out.....

You don't have to think like me. You don't have to do anything for me. I just hope that as the future comes on for me and I have been a ham for a while, that I can be open-minded enough to accept change and certainly open-minded enough not to call people names and have opinions about them because they don't do something the way I did it. But, no, you don't have to do a thing for me...not at all. I consider you pretty narrow-sighted for your opinions, and I plan never to conduct myself like that, that's all.

Your posting and your time to think about these matters tells me you do care...

Kim W5TIT

for the price, they are the best refridgerator magnets on the market.
as for the rest of the antenna, the 10 meter, cb antenna isn't too bad but for
the same money, you could get a K-40 or a good wilson.
good luck.
jeff

pull C-80 near the audio chip and crank up on the 2 vr's on the hi - low switch
and you've got some great but clear modulation.
crank up on the vr next to the final and, with 10 fresh alkalines, you'll get
about 6 watts.
the only set backs are you might open a few garage doors like mine did and
you'll need to buy stock in duracell as it takes a lot of hay to feed all of
them horses.
stick it on a base or mobile antenna and no one will ever know the difference.
you'll also get some good audio reports out of it.
sorry, there no channel mods of any kind with this rig.
have fun and good luck.
jeff

Uniden makes some nice small units, check out
http://www.uniden.com/ (take a look at refurb units
for sale there too).

As for an antenna, as you seem to be concerned about
the aesthetics of your car, you may want to consider a
glass-mount CB antenna, but performance will be well
off a 1/4 wave antenna bolted to the rear quarter panel.

If you can mount a lip mount antenna (under lip of hood)
you could look into loaded sticks like Firestik - they make
2', 3' and larger. Another option, based on age of your
suburban a mirror mount may be in order.

You can probably find an antenna to "mirror" your 2m
antenna (unless you have a 1/4 wave whip!)...

You could also look for a CB Handheld unit, depending
on your desired range that may be your best option.
Refurbs go for well under $50, and can be used in other
vehicles.

A decent antenna will *probably* cost you as much as a
minimal radio...

HTH,

Ken

Yes I do, depending upon whether you need to do any impedance conversion, you use either a 1/2 or 1/4 wavelength stub of coax, and it isn't wound into a coil. A balun made of a 1/2 wavelength of coax gives an impedance conversion of 4:1, a 1/4 wave is 1:1. Any more questions?

Make your own break!

I agree. Here in the 'pile where I reside, violent crimes have actually been reduced. Attribute it to what you may, but I'm pretty sure our lax gun laws have had something to do with it. It's pretty disturbing to a would-be-criminal when he has to stop and wonder if that lil' ol' lady has a .45 in her possession and may pop a cap in his ass! Hell, when serious crime does happen, it is usually a perpetrator from out of town. All the locals know that almost every vehicle with Fla. tags are locked and loaded.

>Assuming cell phones are out of range.

Using an older, analog cell phone will give you "seamless coverage" in many part of the United States. It may be spotty in mountain areas.

I'd do a dual-coverage system. Analog cellular and one other means of communication. The folks who mentioned Amateur radio have a good point. There are repeater directories to help you plan a trip, plus a wilderness protocol for simplex frequencies.

CB might be okay, but give consideration to weight. Probably, you are talking about a handheld unit. Get one where the antenna pulls up to several feet in length, rather than a "rubber duck". Make sure you have channel 19 programmed. Estabilish communications there, then shift to a frequency with less radio traffic.

VHF marine probably would be useless, plus it is illegal. If you REALLY REALLY are concerned about an emergency (and I mean it better be Life and Death--not a flat tire), I suppose you could carry an aircraft band transciever. The range to an aircraft at 30,000 feet is 200 miles (when the handheld unit is on flat terrain. Less, of course, when in a mountain valley). Again, I cannot over emphasize that this is a LAST RESORT because you will be investigated by several Federal agencies. But at least you will be alive to defend yourself at the hearings.

A final suggestion: Approach this like those hiking into a wilderness area. Ask around to see how to summon aid in the particular area where you will be riding. I suspect that 80% of the time, you will find the cellular/CB combination to be the most useful and practical. And don't forget to give someone back home your route and estimated times.

Best wishes. Give us some follow-up after you check around and try out some systems.

Non of these are that great but VHF wins,I asume you were going to use a battery for the CB so why not use a good battery and a 2 meterVHF mobile? These are 50 watts and the antenna will work good on a bike.

>> the Republicans want to get government out of their pockets, homes, and lives.

Unfortunately, this is no longer the case. Today, Republicans are simply "Liberal-Lites." Over the past 5 years, the so-called "Repuublican Congress" has caved in repeatedly to Bill Clinton's demands for higher taxes, more regulation of private business, and more government intrusion into our personal lives. Because of this, I no longer make any donations to Republican candidates and will not do so again until they begin adhering to the principles for which they were elected to office.

I know in California (may be all 50 US states for
all I know), a cellular phone will work without
a contract or service agreement to dial 911 and
possibly other numbers where 911 isn't active.
If that is true where you live (and your local cellular
phone outfit should be able to tell you), you can
avoid the monthly cost of cellphone service and just
carry the phone for emergency use with no outlay
past buying the phone outright.

Second best would be two meter ham. You need to
take a couple of tests (will be only one test after
April 15th), but almost anyone can study for a
weekend and pass the test. Coverage varies from
place to place, but can be very impressive, sometimes
reaching far into places that cellular doesn't.

CB, forget about it. Your range will be very limited,
pretty much a toy for those with very short-range
requirements. There is a lot of lawless behavior
on CB, leading me to suspect that you might not like
the person who comes to rescue/rob you when you
call for help.

On 24 Jan 2000 16:47:33 GMT , MoisesNY spewed forth to rec.radio.cb:
:M>out of the question. The range of a simplex VHF/UHF radio is no better than a
:M>few miles at best, so forget about autopatch also. If you do get your Tech

I'm afraid you're mistaken on this one. I live in very rural areas
(school / home) and with a 5W Handheld VHF radio can reach well over
30 miles with ease on simplex. I am able to hit repeaters anywhere
from 20-120 miles away with this radio as well. Granted, there are
plenty of places where VHF/UHF would be no good, but a few miles is
way to conservative an estimate to use.

3781. Re: Silencing a noisy alternator ?

Newsgroup: rec.radio.cb
Date: 2000-01-24 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <388ce3e0.265774740@news.iserv.net>
Source record: 21630
Body handling: HTML body converted to readable text

Greetings!

I'd double check the Frame to Battery and Battery to Engine Block
grounds. Long runs induce RF hash.

As Jay [THX] has suggested, much of the noise come thru the
antenna. So when you figure you've got the problems licked,
they come back and smell even worse! ;-)

Alternator? Try a .1 uF Feedthru cap at the output on the Alternator.

Any automotive store that deals with car audio should have them in
stock.

Many are rated with watts, while some are designated with
amps they can handle.

Doing some figuring on your own, most stock alternators
have 90 amps surge capacity - so figuring out watts is
Volts X Amps = 13.8 X 90 or 1242, or 1300 watts power
filter cap and choke combo for the Alternator.

Do you really need to do this? Not really. Just take an hour or two on
some weekend and clean the engine compartment, remove the crud on the
battery, tighten down loose bolts, and re-check, and if necessary,
improve those connections...

Even changing the power feed to the vehicles on-board AM/FM radio
power supply wire can do wonders.

Heck, even attaching a ground braid strap for the Exhaust pipe to the
frame ground [thru the muffler bracket] can do wonders for removing
some very annoying noises.

Do the simple common sense stuff first, then go into the more
involved, complex and esoteric solutions...

While Dancing with the Mouse on Mon, 24 Jan 2000 14:46:28 +1300, the
Modem interrupted with an MNI from ""Southern Kiwi"
", and the MotherBoard buffered this to

except that is if you know some locals in the area that are on the CB,back
in the 60's and 70's before the western WA backwoods got so darned
crowded,it seemed like you could call someone about everywhere, these days
with the skip cycle the way it is ,don't think it would be all that great
though,why don't you buy a nice little handheld like the Midland 75-820 or
something similar and try it , they also have a slide on module to make a
mobile out of it,great little spare radio

3783. Re: High SWR

Newsgroup: rec.radio.cb
Date: 2000-01-24 00:00:00 UTC
From: John Amero <" johnaNO§PAM"@island.net>
Message-ID: <388CEAAC.A9A3F62B@island.net>
Source record: 21632

I have been messing around and experimenting and studying
and building 4 element quads and dealing with hard to
install mobiles since 72.

The post I am answering to I support for two reasons...
1) they match my experience and the books I have studied
over time on antennas and how to feed them.
2) SWR or VSWR is not the be all and end all

If you want maximum performance you first need to know the
angle of radiation, how many lobs there are in a typical
installation.... in short the specks on the antenna. Mobile
and base installations are in two different worlds. Again I
am talking max. performance.

The voltage / current ratio at the antenna input is a BIG
factor of antenna performance. And when I speak of
performance I am talking angle of radiation, the number of
strong and weak lobes and bandwidth of the antenna. Number
one is the signal needs to arrive the antenna where voltage
is at minimum and current at maximum. THIS involves the
length of feed line with an accurate velocity factor
calculated in and when this is met then the antenna is more
able to perform to it's specifications and the antenna is
also performing at maximum bandwidth.... a flatter SWR.

My personal beliefs is the antenna and installation is what
makes or breaks a transceiver, not extra power with out the
above conditions met first.

Most posters on this subject are correct, but they just do
not go fur enough except for a few, so I an NOT calling
every one wrong!

Study the following sites in the order listed. They better
explain than I...

Sorry, AB7, but your (our) beloved ARS service has been in such a decline over the last 20 years that the FCC felt something needed to be done to attract new blood.

Of course, your asinine comments like the above where one really good reason why people stopped being interested in the ARS anyway...

And let's here it for the appliance operators out their.

How many Advanced or Extra class ops licensed in the last 10 years do you honestly think could fix an FT-101, much less the FT-1000? And, they all got their license the hard way... By learning code.

Guess the "CW Filter" has done it's job, huh?

My message is not a statement about ham
radio. And I don't represent ham radio.

>>>Whenever you sign a message with your call sign you are representing
amateur radio.

>>>I suggest that you go get an OLD (1950s) copy of the ARRL handbook and
read the preface... Where it gives the 10 rules every amatuer should
follow... If memory serves me well, one of them was that you should ALWAYS
be considerate and careful of when and how you sign your call.... Because
everytime you do, you put yourself, the United States and the Amateur Radio
brethren on spectacle.

>>>That's your whole problem, Dwight. YOU spout off at the mouth, don't
know what your talking about, or just plain make things up and thing you
don't offend anyone else, nor that their are any repercussions.... But,
when you tack that little call to it, you make the entire amateur community
look bad.

>>>Yet another case of the "I'm not hurting anyone but myself, so let me be"
generation.

An indoor antenna will work only if your building has a lot of
wood in it. My building has thick brick and cinder block walls
with concrete and steel girders in the floor. I gave up years
ago in this place. Glad my county went to an 800 MHz system a
few years after we moved in. Trying to receive 39 MHz in here
was impossible!

I find the bands full of contacts now and don't have any trouble finding
someone to talk to.Of course you have to know which bands to use then
and have the equipment but I disagree with the posts I have seen on this
group saying no one is using the ham freqs.I saw one a while back saying
he never hears anything on 10 Meters.

3799. Re: Does Radio Shack Make A Good Magnet Mount Antenna

Newsgroup: rec.radio.cb
Date: 2000-01-25 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <388ce727.266614090@news.iserv.net>
Source record: 21648

Greetings!

As a former owner of one...

I do not recommend the Mag-Mount CB base-load from Radio Shack...

The coax uses a solid center strand, base load itself uses a funky
connector that can snap off and leave part of itself inside the
mag-mount base - leaving you with a useless antenna.

Since you have internet access, try doing a search for CB antennas in
the search engine of your choice.

When the going gets tough, the tough go shopping!

While Dancing with the Mouse on Sun, 23 Jan 2000 20:49:02 -0600, the
Modem interrupted with an MNI from
"ericDONOTSPAMMEthered@eudoramail.com", and the MotherBoard buffered
this to Video RAM:

:+> I've got a Cobra HH45WXST and would like to get a good magnetic mount
:+> antenna. There aren't any good CB shops around here, so I was hoping
:+> Radio Shack might sell a good magnetic mount antenna -- has anyone got
:+> a good recommendation?

>phone was out of range.
>

Cellular was proposed on the chance that the writer was familiar only with digital service, or with analog using one of today's tiny telephones. Most of the cellular users in this country have not been exposed to the alternative.

Those who know better keep one of the older model telephones handy for emergencies in poor signal areas. From the (bulky) bag phone to the out-of-production-but-still-available Motorola Ultra Classic, you can talk from areas where the newer, smaller phones only dream of getting a signal. Besides power and/or REAL antennas (not graphite rods), these phones have a jack for hooking up a 3 DB gain antenna.

If the original poster has not investigated this avenue of cellular communication, I urge him to do so. Equipment often is available in alt.cellular newsgroups at very reasonable prices.

73,
QRM

3801. Re: Small unit?

Newsgroup: rec.radio.cb

You can also use a Wilson 1000 or Wilson 5000 magnet mount antenna so you dont have to drill holes and you can take it off real easy when not needed. Without the antenna on it, most people wont even know you have a CB in it.

Price Updates:

In mtu.forsale Christopher W. Buckley <cwbuckle@mtu.edu> wrote:
:CW B>I have the following equipment for sale:

:CW B>RCI2950 10-meter amateur tranceiver. Modified radio covers
:CW B>26Mhz-32Mhz (Including CB Band) 25W output on SSB, 10W output
:CW B>on AM / FM / Morse Code. Also has PA feature. This radio also
:CW B>comes with a Astatic Road Devil power microphone, an extra power
:CW B>cable, and a non standard bracket. (I installed mine in my vehicle
:CW B>without harming the vehicle, and had a machinist put this together
:CW B>to do so.) I would like $200 Or Best Offer for this radio.
$175 OBO for the RCI-2950

:CW B>250W Linear Amplifier w/preamp. This is a high-drive amplifier
:CW B>to match the above radio. It has a low, medium, and high power
:CW B>level, as well as a receive amplifier (preamp) Works very good,
:CW B>but will have no need for it if I sell the radio. I would also
:CW B>like $200 or best offer for this.
$175 OBO for the Linear Amplifier

:CW B>2 - "Penetrator" style antennas. These are the longer (about 4')
:CW B>high whips with a coil running externally around the lower 8" or
:CW B>so. Each has a very heavy magnet mount, never been able to get it
:CW B>to shake loose (and believe me, I have tried) in the 6 months I
:CW B>have owned them. At present, one is tuned for the 10-meter amateur
:CW B>band, and the other for the CB band. They can even be retuned and
:CW B>used together to get some directivity out of the antennas. $30 / OBO
$20 each for the Antennas now.

:CW B>Radio Shack SWR/Field Strength Meter. Can be used to tune the antennas. - $30

:CW B>I will be willing to part with the entire package for $400.
Whole Package now for $340

:CW B>Buyer pays shipping, if shipping is necessary. Though this equipment is
:CW B>very operable on the CB band, it is not legal to do so. The amplifier
:CW B>output is over 20 times the legal power limit for the CB Band.

>No CW=CB<-----This = B.S.
WAKE UP!!!!! This phrase "No CW=CB" is pure bullshit. This is what it
will be, "No LICENSE=CB".

It is apparent you Pro-Coders are fine with yourself all alone in the
CW portion of the bands (Except for a good Few). Wouldnt it be nice to
actually use it with someone? The FCC opened up the door to encourage
more people to get there license by Granting No-Code licenses, Now
they opened the door again to encourage allready licensed operators to
upgrade and use code. But all You fools can do is Whine and Cry about
it. A toddler cries less than you. Can you even go to the bathroom on
your own? You guys remind me of an idiot in San Francisco (K6CBL),
that would brag night and day about how good he is with code and that
he has made contacts almost all over, But the poor sap never left the
2 meter band. Could this be you, Jack?

Man, Just think of it, in another year, you will be making contacts
right and left because of this decision. You'll wonder where all these
people came from helping you get QSL cards and so on. But not once
will you think about the restrucure doing this for you and those
paddling with you.

Here is another thing to think about. You only have priviliges to
operate on these frequencies, Not own or rent them.

| Prozac, this group is here to learn and exchange information about the
| hobbie. Why are you here? To brag about how much money you got and how
much
| material things you posses? There's more to it then that. We just want
to
| learn, and remove the hidden vale behind why his amps and others are so
| great and cost so damn much. If I really wanted to infringe on copy
rights
| I would just go buy a box and dissect it. That's one thing I don't hear
| Hams crying about, they don't say "this is usually not free info." They
| share there knowledge so they can improve and enjoy there hobby together
to
| the fullest. Besides, how many people have the drive to take this
"secret"
| info and start building there own amps? A very small percentage, have the
| WILL to spend countless hours, dollars, and hard aches to achieve building
| there own equipment. And if so great, the competion only makes price fair
to
| the consumer. How much have you gained Prozac here in the group
| technically? Yes you know a few catch words, and know what parts is
needed
| to put a mobile station to gather but, when it comes down to the
competition
| edge do you have the KNOW HOW to put it all to gather, tune it, and make
it
| work? Or are you going to reach down in that pocket book and buy your way
| to stardom? thats what I thought. Hehe, im out.....

>Assuming cell phones are out of range.
>What is the optimum transceiver for emergency only use on remote rural
>roads while solo bicycling?
>

i hate to admit it but your best overall bet would be a ham licence.
one thing to think about is a small section in the FCC rules that states that anyone can use any frequency WITHOUT a licence in the case of a LIFE THREATENING EMERGENCY.
mind you, i wouldn't want to get caught with a hot police H / T but if you got a wide band ham H / T and modified it for broadband use, it would better your chances of being heard by someone.
i wouldn't use it to call the ABA,(American Bicycle Association:), for a tow but when you need help, you need help.
i know what you said about a cell phone and don't know weather you own one but i hit a deer in kentucky at 10:00 pm 5 miles from town in december and there was no PCS service for my phone in that area.
i bought a dual mode just for this reason. a cell phone doesn't even have to be activated to use it.
i went over to analog roam and called 911 as my van was disabled.
the 911 call was free but watch out for those credit call roaming charges.
my wife called her mother in W. VA. to tell her we would be quite late. a 5 minute call cost $12.00!
good luck with what ever you decide to use.
jeff

3816. Radios & Beam For Sale

Source record: 21665

1. Galaxy Saturn Turbo. I am the original owner and this radio is in excellent condition and will not disappoint anyone. I have had nothing but compliments on the signal quality. Radio puts out 175 watts pep SSB and will deadkey 4-50 watts AM and swing to 150 watts. Radio will ship in the original box and stock mike. $ 500.00 + shipping.

2. RCI 2950, I am the original owner and this radio is in excellent condition, has a LT-2 echo board with dual controls. will ship in original box with cord, mike, mounting bracket. $ 175.00 + shipping.

3. Gizmotchy Beam Antenna with two power boosters for a total of five elements plus a antenna support kit. Boom length is about 17', Horizontal and Vertical Gamma Matches. I have all original paper work. $ 150.00 + shipping

>Your probably right,but I do like the old system.
>

i think it would be great to keep the code going even if the ITU / FCC dropped it altogether.

the way things are now though, it is like the DMV requiring everyone to learn how to ride a horse in order to get a drivers license just in case there was a disaster that shut down all of the gas stations and people would still be able to get around on horseback in such an emergency.
it would be nice to be able to get around in such a scenerio but it needn't be required for a licence to drive.
another option would be for people to walk.
an analogy to voice instead of CW. with the advent of modern electronics. voice communications are much more dependable now then they were in 1934 when the FCC was formed.
good night.

>>good luck.
>> jeff

i read the original post. i gave the benefit of my own experience with similar problems.
i do admit, it is hard to diagnose such problems sight unseen, but i am curious as to what do you base your intelligent comment on?

>Bullshit..

the only thing that i can think of is either you were there and did the mod and probably don't know what you're doing and, in the process, screwed up the radio, (your response sounds defensive), you have never encountered such problems before and are so closed minded that you can't accept a plausable explaination grounded in solid theory or you just have some extra time and bullshit of your own to throw around.

anyone who knows anything about cb's or radio in general for that matter, knows that there are several different radio frequencies generated inside a cb wether intentionally, ie; mixer / ocillator circuits or unintentionally as in poor design and filtered out in later stages for the sake of saving the almighty buck.
if ANY of these filtering circuits are tampered with and pushed too far out of the original design tolerances, these extra frequencies, AKA harmonics, can, and will escape out through the antenna plug.
if this happens and the offending signals are of high enough power levels, they will show themselves as high SWR, (feeding an antenna tuned to 27 mhz with a 54 mhz, 20.XXX mhz, 11.XXXmhz, etc. harmonic), TVI, feed back through un-bypassed mic and audio circuits and, in some cases, slightly higher B+ current readings with no corresponding gain in output at the antenna.
if you have ANY solid theory to refute anything that i've said here, i would be

interested in learning from you. the only request that i make is please
translate it into english from your native tongue of bullshitese.
thank you.

>expencive equipment.....? i goto hear
>this.....BusDriver
>

in some radios, there is an internal adjustment for RF gain. in some cases
there are modifications that can be done to increase receiver stage gain
figures.
the factorys generally don't do any more than they have to, to get the radio on
the wal-mart shelf at the lowest price possible.
if this wern't the case, a low end maxon, midland or royce would easily stand
on the same step with a top end cobra, uniden, or cybernet. the old addage
applys, "you get what you pay for" or, at least, you used to 20 years ago. :)
good night.

I was reading the post about Charlie and think it is probably BS at best. I have dealt with Charlie for years and granted he has his moments. Some days he doesn't have 2 minutes for you and other days you have to beg to get him to let you hang up, but you can't beat his prices and as far as I know he pretty much sells to dealers only. If he wouldn't sell to a certain person I feel sure it was more than a Race thing.

I have alot of time and effort invested in ham radio Cecil. I love it as
much now as I ever did. I'm just tired of all the pissing and moaning.
Restructuring is a done deal..there isn't a damn thing me or anyone else can
do about it. If I have an opinion
that "tit" doesn't like..I'm a bad guy...well piss on her and anyone like
her. If she/they take that attitude to the HF bands they are digging their
own graves. When the "narrow minded" "old farts" don't listen to their
crap..it'll start a war on HF that'll make 14.313 and 3.950 look like
preschool.

I recently heard that the FCC is going to repeal the 155.3 mile restriction on CB communication. That will make DXing in that band legal. Not that some people care anyways. Just thought I'd let you know.

Source record: 21690

Radio Shack makes a Solarcon Penetrator look alike that does work fairly well. But I would still suggest a Wilson 1000 for a basic antenna. If you want one that is a little shorter try the Little Wil. It is good for it's size. Hope this helps.

You have to be very careful with these mods. I have seen more than a handful of burnt boards as a result of someone performing this mod. If you are still interested, don't adjust it to max. power. That may allow the board to last a little longer.

Get away with it - piece of piss.
After you have blown the scum's head off with the good old 12 guage (note killing the scum is essential - dead men cannot tell any lies - or at least disagree with your version of events), and then you place a weapon (preferably a huge butchers knife) in their hand (and wipe your prints off it). Claim self defence and you are laughing all the way to the bank - I don't think that the dead scum's family could get you for a wrongful death lawsuit - it is as near to watertight as you can get it!!! DEATH TO SCUM - GO THE VIGILANTE LAWS!!!!!

I saw the weather reports on the television. Man, you don't know what a snow storm is. You just got a light dusting, mixed with a little cold rain. Now, the people in the mountains east of me are having a snow storm. Even the trucks with snow plows are getting stranded (seriously).

On the lighter side, one person reported seeing a snowman trying to come in out of the cold. And the sled dogs are using snow mobiles to get around. Now, that, my friend, is a snow storm. ;-)

There is not that great a power differance...
And if your not going to use the SSB then the extra channles are not much either.
(And you can still get an expo kit for the 78 if you really want them)

And the Grant is Larger, takes more space and is harder to mount in some newer trucks.

If the 78 is working stick with it.
I know more drivers that use 29's and 76/8's than about any other radio.

I use a 5 1/2' francis and a 5" magnet. If it tends to blow off (this can happen if your roof/trunk is not VERY stiff metal) Then add a spring (not the big pot-belly one, the smaller "heavy duty" one)

Works good for me has been on the roof of my Chevy Astro for 3 years and holds up to 90mph.

I do tend to avoid drive-thurs <G> (over all about 13'6")

you have to be careful changing the chip.
there are solder traces on top as well as on bottom of the board.
take a closer look, maybe you have a bridge or not well soldered connection,
or a pin bent and not going into the hole etc...

If the chip worked in one then not after swaping it the odds are that its
not the chip (assuming you took normal caution with it)

All that aside, I may have one in a junker. I will try to and remember to
look in the morning.

You might also look for a "Chipswitch" chip. (copper used to sell them) It
gives a lot more features.
(OR chuck the whole thing and replace them <G>)

Well,

I have to agree with chris and joe. Some people just do not think much. I could tell stories upon stories about some of the things that I receive back from people stating that my prices are too high, or that no one wants what I am selling. Funny thing is everyone that I do sell to is very happy with what they receive.

The conclusion that I have come to is that those who complain anyway do not have the money to spend in the beginning -- they only have their mouth to spend.

I guess that is why I become so angered at those people who try to put in their 5 cents but only have a penny to spend in true intelligence.

Someday, i am sure, after 6 years of college spending mommy and daddy's money they will realize that.

Just have the respect to slam someone in private. Then maybe your loud mouth will be heard.

Respectfully,

KIP**************************

I hate to disagree, but the Dak X is a Cybernet chassis that
uses a Motorola MC145109, which is the same as a
PLL02A. To my limited knowledge, Uniden never used
a Cybernet board. Why would they?
They were competitors.

Toll Free was correct saying it was a Midland. A Midland
78-999 or 78-574, or a 79-891 were similar, as was the
GE Superbase. These were all based on the above mentioned
PLL.

Just my two cents.

This may seem transparent, but it appears quite simple why so many folks break the law, including, but not limited to freebanders. The law, in all it's majestic equality, forbids the rich, as well as the poor, from sleeping under bridges, begging, or stealing food. As you know, this isn't the case. In other words, many of the laws are WRONG! I was specifically referring to the mandatory minimums in effect and they are wrong. They have created, yes, created, criminals out of ordinary, otherwise law-abiding, tax-paying citizens. If you have no idea what I am referring to, you are part of the problem and not the solution.

Hay, things are just as nuts up here in Canada. It is still
a "privilege" to have a drivers licence but 90% of the
people could work with out one and a drivers licence in
many cases is the only piece of ID accepted. Go figure,
huh!!??

not what so ever, in non dx times, of course it would when the band was
open , it would also be about as frustrating as 11 meters ,what I myself
like Tracy is sporadic E type dx,the kind that opens up our region to each
other,sounds like you folks have a great local ham club in your area,

At which coax length did you see the lowest SWR?
If you did your measurements with a dummy load that was non-reactive
you wouldn't see anything that you have stated.

interesting post , i must say old chap, but i didn't know that entrepreneurship was encouraged in the old country , considering you have a 85% tax rate on income, but whatever. so you say you found a russian beauty and you married her. well i think , in my opinion you made a error in judgement. i have met these russian beauties , as you say , over here, and to tell you the truth , i think , for the most part , they are a bunch of hustlers. now , it can be said that before they see how people live in other parts of the world, sure , they are innocent and nice. but russian babes learn fast and i will say that i do not trust them as far as i could throw them. for curiousity's sake and you certainly don't have to answer this question , but what was wrong with a good old english laddie?. some of your babes are real nice, at least in my opinion. to me there is a great gulf between russian culture and white european culture and for all its worth, heck, marriage is a tough ticket these days anyways , and sir, i do , really i do, understand , the frustration all these gents who are looking for love and can't find it, but you have to be the person you want to meet . and to me , these guys who go somewhere else looking for a woman are a bunch of loosers anyways, and what tops it off is these guys think they are going to hide that fact by getting a 'innocent babe' from russia. oh please, the woman comes over here, uses this chump to get her ass over the great pond. then she finds some excuse to get rid of him and vola, she has a permanent green card. ain't that something. or course , i am in no way sure of your situation but these are the things that i think of when someone these days , says to me they are married to a russian woman . so i think i am ready for a spot of tea, talley hoe old stick,.....curious dan is out.....ps....i would have answered your post on thread but i just hate that confounded cookie action of dejanews, cia0!!!!!!!!

The best way to do it is to scrape the "green shit" from the B+ trace and solder a nice thick bead onto it to increase the current carrying capability of the B+ leads.

Greetings!

I've found at least two different types...

uPC1242H - 8 pin - Printed side facing out
KTA7217 - 10 pin - Printied side facing sidepanel it heatsinks to.

One Cobra 20 used a board similar to the Pro510e - [Grey key mike] and
used a DIP TDA 1905 similar to HR2510 and Pro510XL - can be identified
by the copper heat sink rising from the board, and not mounted to any
side panel.

If you count the number of leads going into the board, it should be
the one you need, listed above.

Reason for the different chips? Beats me, but older Cobra units made
by Uniden for Cobra seemed to have swapped a few times.

Just an FYI...

[Just not sure what board you've got...]

While Dancing with the Mouse on Tue, 25 Jan 2000 07:37:51 -0800, the
Modem interrupted with an MNI from "hillbillydave
<davesNOdaSPAM@oztech.com.invalid>", and the MotherBoard buffered this
to Video RAM:

Nonsense, Toll. Are you saying that when you use your CB handle, you represent the entire CB radio community? Have you asked the other CB operators if you can represent them? That radio callsign is nothing more than my signiture - it ID's me on the radio, or in situations involving radio. It does not represent anything beyond that.

> That's your whole problem, Dwight. YOU
> spout off at the mouth, don't know what

Of course, none of that applies to you, does it, Toll? You have never been wrong in this newsgroup? You have never offended anybody in this newsgroup? And you are always aware of the "repercussions" of the things you say and do? It must be so wonderful to be so completely perfect that you can preach down at others.

> Yet another case of the "I'm not hurting anyone but myself, so let me be"

Well John, IMHO, I'm glad that you're not the person who decides what is appropriate in this newsgroup.

But, for your gratification, my ham radio callsign is also used as my CB "handle" - it is used as my ID on the CB radio and everyone in the area knows me by that "handle." Therefore, it would be appropriate for me to use it in my signature when posting to this newsgroup.

After reading how many are happy with candymans service I need to
re-evaluate what I have said,perhaps there was a reason I'm not aware of
why we had some problems,what got me so fired up was what it did to my
rep when I ordered an expensive Galaxy 1000 and it didn't live up to our
expectations(or anybodys)and my only recourse seemed to be to EAT IT!
If so many are happy then I'm sure he is OK and I apologise.On the
other hand I won't go back there because unlike what the above post says
his prices are not wholesale,maybe only 1 step above it but I do better
now.

Sadly, this started long before 5 years ago. It was Reagan that started the massive immigration that is currently helping business drive down wages for America's workers. Certainly Clinton accelerated the process (immigrants tend to vote for Democrats), but it was Reagan that started to current massive push (to satisfy big business).

It was Reagan that instigated the elimination worker's rights (anything to satisfy big business). While much of Reagan's efforts were rolled back by Clinton (especially for minorities), the initial effort was started by the Reagan White House.

And the Republicans stood side-by-side with the Democrats to pass the current trade agreements that are allowing companies to move American jobs to other countries. Don't blame the loss of jobs in America just on the Democrats.

And, speaking of Democrats, lets not forget that Bill has done little to stop the massive layoffs, and wage cuts, while profits for big business have soared in this country. So much for his claim that he is pro-labor.

As you can see, I don't like either poiltical party. I don't think either party gives a damn about America. Oh, they both give great lip service in their speeches, but actions speak louder than words. Wages, when adjusted for inflation, are at a 85 year low.

The gap between rich and poor has never been wider. Middle America is disappearing - they are joining the ranks of the poor. The cost of living is at an all time high. And I have never seen the the America people so angry.

And the politicians (in both political parties) sit back and do nothing. After all, big business is happy and that seems to be all that matters to the current members of government. After all, why should they worry? They have the political system locked up.

> that really deserves a bain such as ours.

Jeff, you need to step outside and take a good look around. Yes, unemployment is down, but so are wages. Two people are having to work today to live as well as our grandparent did forty years ago with only one person working.

And, if inflation is so low, why does everything cost so much (and keeps getting more expensive)? Yes, electricity does cost less today, but we pay far more after the endless fees are added (these fees are often not added to the cost of goods and services).

Welfare reform is a total joke. All Clinton did was order government agencies under his control to hire those people kicked off welfare. The result today is a government that runs even worse than it ever has (if that is even possible).

And yes, the stock market is up. Big business is doing wonderful - profits are at an all time high. I'll celebrate when I get some of those profits.

Yes, we're doing better at the moment than Russia and China. But every other industrialized country in the world is doing better than us. Too bad those countries don't have better immigration policies, I'd leave in a heartbeat.

Of course, that is perhaps why they are doing so well, the politicians in those countries worry about their our citizens first, before opening the flood gates to massive immigration.

> year. Oh well!

You seem to be blaming the laws for the massive incarceration rates.
What about the criminals? Nobody forced them to break the laws. And,
if they didn't break the laws, we would not have a single person in
jail. And then you would not have to fuss about the incarceration rates.

All those other countries have nearly the same laws on the books (some
have even more laws). The reason they have so few people in jail, when
compared to us, is that their citizens simply don't break the laws as much.

So, if you want to do something about the incarceration rates, figure
out why so many people in this country break the laws. Do something
about that and then you would really be accomplishing something.

The RF exposure tables should give a good hint as to the first question. Near fields refer to the RF energy fields near the antenna. Far fields refer to the RF energy fields farther away from the antenna.

As for the second question, there are about twenty-five ham bands. It would take some time to list the frequency range of each of those bands here. Have you tried searching on the internet for a web page that provides a list?

If all else fails, go to Radio Shack and get a study guide. The ARRL's "Now You're Talking" study guide (Radio Shack item #62-2427) has a chart on page 1-11 that gives an overview of the amateur bands.

You will be able to get more power out of the Grant XL for one, Not to mention more channels if modded properly. I know of alot of truckers who have gotten the Grant XL and Cobra 148gtl since they are both the same radio and had them modded and went to more quiet frequencies so they wont get interupted by others on the same channels. The Grant XL is by far a better radio, But if you like the one you got and dont have any complaints, dont bother upgrading.

Dan,
>and all this commotion over this mundane material, and for what , bragging
>rites, i still say it doesn't prove anything when it comes to amps .
I happen to agree with your latter point. It's not the most scientific
way to test amp's but most people enjoy bench racing from time to time.

Everyone has there reasons for involving themselves in shoot-outs. I
like the technical aspect. It's quite something to keep a 1000A+ power
supply in check!
> so phil
>, are you sure you want to burn up your vacation time witnessing this patent
>absurdity.
I work for myself. I take vacations when I want to.

3943. Re: Does Radio Shack Make A Good Magnet Mount Antenna

Newsgroup: rec.radio.cb
Date: 2000-01-25 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <N6jj4.5583$bp2.258563@newsread2.prod.itd.earthlink.net>
Source record: 21867

I STILL think the best mobile antenna RS makes is the "Deluxe Mag Mount". I know they changed the design a year or so ago, but prior to that it was every bit as good as the K40 and others. No, not as high power as the things with the big exposed coils, but a decent performer. Built with good heavy duty wire in the coil, and a decently stiff whip. I've used mine on both CB and 10M for a number of years. I've worked eastern Europe and Russia with QRP from my car. I used that antenna on my TRC-449 CB set, and with my HTX-100 10M rig with no retuning, and had a blast.

The only bad thing I've heard about the Deluxe Mag Mount antenna wasn't really about that antenna. Apparantly RS used the physical design as the basis for their 2M mag mount, and it got a reputation for not being watertight. It worked quite well, but it would leak, and then freeze, cracking the case, then corrode. But that may have been more a result of converting the physical parts to the 2M design, and not an issue with the CB version.

Mike

they aren't caving in, they are reeling clinton in.
they are letting clinton have his way so when the elections come along, they can say "look at what the democrats did".
i think it's terrible how those damn democrats have lowered inflation and unemployment, put limits on welfare, and ran the stock market up to astronomical hights.
what we need is a republican in office to put people out of work so we will be forced to remove those nasty welfare limits, bring the stock market back down to the levels of 1929 and bring inflation back up to a level that the russians would be proud of.
have a good day and pray for the day that this black cloud of prosperity will leave our suffering country and go somewhere like russia or china or some place that really deserves a bain such as ours.

Nope, don't have those except for 12 ga Winchester Model 12. I have mostly NATO/UN calibered weaponry so can use ammo of disabled invaders.

Do have one L-O-N-G range weapon so I can "reach out and touch someone."

I'll let you figure out what that is and hope that you are not on receiving end of 1/2-inch diameter lead slug with .22 short inserted and small amount of mercury for dependable dropping!

Definitely NOT a sporting weapon. Meant for disposing of vermin!

ANYONE who registers what is a right by law of the land is an ignorant FOOL and doesn't deserve to have or be able to use the items or the "rights". Presumed rights "conditioned as the legislature may deem necessary" become grants of legislated privilege to be registered and taxed for their use.

"Where rights secured by the constitution are involved, there can be no rule making or legislation which would abrogate them." Miranda v. Arizona, 384 US 436 491

"No state may convert a right into a privilege, issue a license for its use and charge a fee for its exercise." *

"If a state does convert a right into a privilege, issues a license for its use and charges a fee for the exercise of the privilege, the citizen may ignore the law with impunity." **

"Any citizen who uses the opinion of this court in support of his actions has the perfect defense against a charge of criminal intent." ***

"The citizenry are the recipients, the directly intended beneficiaries of the constitutional protections, what that means is that government must bow to the will of the people and in any altercation between the government and the people, the benefit of the doubt must go to the people." ****

There - I found you the starting point, now it's up to you to find the supporting opinions of the U. S. Supreme Court.

Some hints:
Pennsylvania
Boyd v.
Shapiro
Thompson

Why not check your state supreme court opinions for the equivalent to this from Wyoming Supreme Court in Weaver v. Wyoming Public Service Commission: "The citizen in Wyoming has the common law right to the use of the highways to transport himself, his guests and his property thereon using the usual and ordinary conveyances of the day and the government has no power to abridge that right."

I'll bet your supreme court issued such an opinion and the legislature, in defiance of it has legislated the right to travel into a privilege to drive and the courts ignore the supreme court and punish for failure to sign up for the privilege to drive, the privilege to sign ones property

over to the master state and the privilege of contributing to the obscene profits of the insurance companies in violation of "no taking of private property except for public use" edict of the supreme "law" of the land.

"Any citizen who uses the opinion of this court in support of his actions has the perfect defense against a charge of criminal intent." ***

"The citizenry are the recipients, the directly intended beneficiaries of the constitutional protections, what that means is that government must bow to the will of the people and in any altercation between the government and the people, the benefit of the doubt must go to the people." ****

There - I found you the starting point, now it's up to you to find the supporting opinions of the U. S. Supreme Court.

Some hints:
Pennsylvania
Boyd v.
Shapiro
Thompson

Why not check your state supreme court opinions for the equivalent to this from Wyoming Supreme Court in Weaver v. Wyoming Public Service Commission: "The citizen in Wyoming has the common law right to the use of the highways to transport himself, his guests and his property thereon using the usual and ordinary conveyances of the day and the government has no power to abridge that right."

I'll bet your supreme court issued such an opinion and the legislature, in defiance of it has legislated the right to travel into a privilege to drive and the courts ignore the supreme court and punish for failure to sign up for the privilege to drive, the privilege to sign ones property

over to the master state and the privilege of contributing to the obscene profits of the insurance companies in violation of "no taking of private property except for public use" edict of the supreme "law" of the land.

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connection as well. Uses 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

Homer
ah549@chebucto.ns.ca

While I haven't heard that the FCC was actually planning on repealing the distance limit (no "report and order" yet)... it is VERY true that there is a a "Petition for Rulemaking" before them requesting exactly this. If you are interested in filing your comments with the FCC on this matter (they do listen to comments), go to their website and do so.

>mhz to __ mhz; 2 meters equals __ mhz to __ mhz. Thanks for any help
>you could provide.

Sounds like you need to buy a REAL study guide... that should all be
explained in your book....

In simple terms...
Near Field is the RF energy NEAR the antenna
Far Field is same energy at a distance farther away.... distance is stated
in FCC's RF exposure tables.

!0m (entire band) = 28.000 - 29.700MHz (General Class and above licensees)
Breaking that down a bit...
28.100-28.500 = Novice band (28.1-28.2=CW)(28.3-28.5=SSB)(200watt
Max power for Novice Class)

Here is one for you.
It`s called a Cleaveland Fallout or Atomic Bomb !!!!!!!!

Take a rocks glass(about 3 1/2 inch wide and 4 inch tall) and put about 3/4 inch of your favorite beer in it.
Take a shot glass and fill it with your favorite whiskey,bourbon,ect...Set it down into the rocks glass without spilling it.
Take your favorite wine(darker the better) and pour it directly into the shot glass sitting in the rocks glass so the whiskey runs out into the rocks glass.Do this at a reasonably fast pouring speed and fill the rocks glass up.You will note that the liquid inside the rocks glass now looks like an atomic bomb explosion.Pick the glass up and drink it down.Don`t swallow the shot glass.You will note that the taste constantly changes while you are drinking it.
No,I wouldn`t say it was a great tasting drink.
Yes,I used to drink these.
Yes,I was a bartender in a respectable place where we occasionally made these.

73`s
Randy

>I would think if I constantly post on the Ham N/G and end my
>post like the following all the time. it would annoy some.

Although I would tend to agree, what someone uses for a signature should be the LEAST of our worries! If you're worried about signatures and THEIR propriety, maybe you should read a few of the other posts in this NG... appropriate??? ...you tell me.

Signatures mean little.... using a Ham call sign does make it easy to see who the person posting is (if indeed, it's their own). On the other hand, using a Ham call sign in your signature to somehow 'prove' your extensive knowledge would be joke... just being a ham (regardless of class), or for that matter a GROL, doesn't make someone a "Radio God". NEVER just take someone's word on something you can research for yourself.... hit the nearest University or Library.

Ok NG Whats the wildest and or funniest story of your cb history.

I had a major problem with a Rambo wannabe, This guy was a royal pain in the ass! He would follow several of us to different channels no matter where we went. This went on for few months,then this one night I was sandbagin. The other people on my home channel were talking to my wife. Then Rambo started his crap said a few choice words to my wife and I started to see Red. Up until now noone could find this guys 10-20. I found it a hidden antenna coming out of first floor window. So I tied it up to the bumped of my truck. Pulled that son of bitch right out the window,glass flyin everwhere! You should see that radio hit the pavement. BOOM plastic all over the place. I thought the coax would have snapped before the rig came out the window! Never had a problem again with the guy! But it sure was Funny The Noise It Made rig hittin the wall then through the glass then the pavement not mention I wonder what his powersupply looks like today!!!!!!

Everything I hear is good. I'm saving for the 696F. Can anyone tell me
how it compares to the Uniden Grant LT? Don't bother unless you can
actually say why you think the Grant is better.

Paul

3980. FS: Hygain Afterburner amp.

Actually, if you knew anything about the radio at all, it's worth tons more than he's asking, and it's in real good shape.

but it's obvious you don't so I have to ask, how can I join this club that goes around trash talking everything they know nothing about, therin making themselves out to be complete morons.

You seem pretty good at it, so I though I'd ask you.

Oh, ok. I'd rather sell it on eBay than to a vulgar
know nothing peice of crap anyway, because the radio
has sold for:

$194, $120(broken), and $182.20 none of which had power mics,
and similar prices have been found there for similar amplifiers.

Do you really take time out of your day to flame everybody selling
RCI radios? Check out rec.radio.swap. These things are selling for
this price scheme. Same story in rec.radio.cb and other newsgroups.

I guess in short, Bite ME.

(And to the MTU community, sorry for opening up a loophole to
some of the worlds least civilized and most vulgar newsgroups.
Seems the scum of radio can't talk like they type on the radio,
so they have to spread it out on the internet)

I dont know what to tell you, I have a "Teaberry Stalker 9" That has
the same exact board as the DAK X. Both use an MB8719 PLL chip. I had
to get the SAMS Photofact for a Teaberry Stalker 9 to get this "DAK X"
thing going. Seems I got it going with no problem using the prints.
The fact I compared it with a 142 was incorrect since I cant remember
what the board is entirely. Only reason I sold it is that I didnt like
the damn tube. You can argue this with me to your grave, But since I
rebuilt the board in it using an old President Grant, I know it had
the same board as That and the Teaberry....

Here's the posting from that dark day in yesteryear....
Here is what I wrote after watching (one of) your public outburst(s):

Subject: Re: Fractal is crap on ANY band
Date: 11/23/1999
Author: MC 10kW Jesus <qsl27@hotmail.com>

I'll give you the same advice I've given others. Shut your cake hole! Any company rep' that posts on the Usenet is a complete idiot. Sorry chief. I wouldn't dare represent my company by posting here. If I were you I'd put a cork in it before you have no business left.

Before this, I'd never heard of your company or products. But now I know a couple of things about Fractenna:

- the one customer I know they have is upset
- I wonder if they must antagonize ALL their upset customers?
- they try and obfuscate the issue with a personal attacks
- they've done nothing to resolve the issue
- nobody is jumping to the company's defense publicly

Git da' picture?
MC has spoken

The point I was trying to make is that Joe Average is going to come to the above conclusions. I'm sorry you didn't pick up on it as you seem to be the only one.

> 1)Obviously if I was not the moderator, I would not have posed the invitation.
> The size of the lists indicate that almost 400 subscribers didn't get 'scared
> away' --despite your attempt here to do so;

Nonsense. I was giving people the heads-up that they may be heading into an -infomercial-.

> 2) I invite anyone who has been unhappy with the moderation--that is if it has
> shown bias; non-objective decisions; lack of well-stated basis for expunging

> posts; and so on-- to publicly state so and state why and give my alleged
> offense . I will GLADLY make them moderator!;

This is daft. You're hardly going to -promote- somebody whose posts you've rejected. Not to mention, they are hardly going to be interested in further involvement.

> 3) Your approach to CB radio entails illegal use of high power. I do not
> advocate your illegal use of the radio spectrum and told you so. I tell you
> this again.;

-yawn-

> 4) Analysis of USENET reveals a non-trivial number of folks on this NG have a

That's just wonderful, Chip.

> As to looking at my posts on RRAA--why not? If you--Mr. 10Kw 'Jesus'-- had
> attempted to read and understand them you would learn some insightful info on
> new antennas.

That's 10kW. If you were any kind of an engineer you would know that the proper short form for kilowatt is kW and kilohertz is kHz.

Feel free to answer this post and get in the last word as I'm plonking you in my filter.

MC just got down!

You can keep arguing about it, But when I look into the damn thing, I see an MB8719 pll chip inside of it. It was rebuilt using an old President Grant radio for parts. Now I dont know if Cybernet has used the same pll or not, but the boards in this radio are the exact same board as the "Teaberry Stalker IX" and "President Grant (newest non export; Not Uniden Grant)" Only difference between the two is that the DAK X uses a 11.1125 xtal instead of the usual 11.3258. The DAK has an SO42P xmit mixer and a TA7222P Af Amp and the frequency range is more lower than the usuall MB8719 PLL because of the above difference in the xtals.....I consider this debate over...I restored the damn thing and have owned it for 4 yrs till a couple months ago. This is the second one I seen in my life and this and the other were exactly the same because they were both purchased from the same dealer (used) at the same time. One went to me and one went to a friend of mine (ShitHead "595") in Fremont, CA.

Well you didn't learn very much from your years in radio!

Brush up on your basic radio physics, Smith charting, and
tuning practices. Try to remember what reactive elements
are involved in RF (AC) signals and what affects them, like
capacitance (coax acts as this in RF circuits), inductance
(coiled coax traps are made this way), and you must remember
if you are such an old timer that the two create a reactance
and that this reactance equates directly to impedance, No?

I've proven it to others locally who doubted and I told others
on this NG how to prove it to themselves. So you can try it,
or play arrogant and don't try it.

I'm sorry for the bluntness, but this argument is getting old.
No disrespect intended

Good, Good!

We're making some headway!

Now how can you sit there and tell me that changing the
wavelength (which is directly reciprocal to frequency)
will not affect the tuning of your output?

Whether built as a stub, coiled balun, or simply left at
any given length, is the coax not an active element of the
output circuit regardless of how it is coupled?

Yes, of course it is! And to get maximum output, you need to
insure minimum loss. To insure minimum loss you must insure
that the ENTIRE ouput circuit is tuned to your frequency.
Oh but then maximum ouput vs. minimum loss is a lowered
VSWR. Of course this makes too much sense!

As far as taking a break, this argument IS getting old!

>
>What one hell of an attitude. Your are the type that screws
>up everything for the rest of us. So some as selfish as you
>just takes with out asking?

Amen! However, I suspect that original post was pure BS, John. There was a period of time when some truckers adopted a frequency in the CW portion of 10 meters to use as a "company channel". In other words, as they rode along the same route, they would hop over to this quiet spot to chat without the interference on the regular CB.

In 1994, a network of hams performing an intruder watch (a cooperative FCC/Amateur Auxillary project), began tracking the activity. Some of the AM Aux members were truckers, themselves.

As a pair of trucks was detected, they were tracked to determine which Interstate and direction they were traveling. Arrangements were made to intercept them at the next "chicken coop", where they were confronted in the presence of DOT officials.

Most of the drivers expressed sincere surprise that they were in the allocation of another radio service. The radios were of a kind unknown to most of the hams. There was no frequency readout, just "channel" and "band" switches. A few trips to some "outlaw" CB shops produced two charts of band/channel combinations which extended well into the 10 meter band. Without the chart, one had no way of knowing the actual frequency to which the radio was tuned.

No action was taken at the DOT stops, other than giving information to the drivers. However, it gave the project members an idea. Articles were written for each of the popular trucking magazines. (These are produced specifically for those folks who drive the big rigs. If you ever want a full appreciation for the dangers involved in trucking, plus what these people put up with (including nutty regulations from state to state), pick up an issue at a truck stop.) The articles described the problem, the potential reprocussions, and asked for cooperation.

Meanwhile, letters were sent to the presidents of the largest trucking companies, making them aware of the problem. A satisfying number of these Corporate leaders (and/or their legal departments) responded that they were inspecting their trucks for illegal radios and were making it clear that being caught in the ham bands would be grounds for dismissal.

While there still is occasional activity in 10 meters by independent truckers, all these efforts caused a great reduction in the problem.

Based upon the cooperation I have seen from 1994 to date, plus my personal acquaintance with a number of big-rig drivers, I believe that Mr. Big-Bad-Radio is "blowing smoke".

If he's not, then we'll see him at the chicken coop, one of these days! (grin)

See chris,
This is what happens when you cross-post out of the mtu newsgroups. You open up your posts to the general public, and the collective intelligence goes way down. This is a prime example of how any imbecile with a citlink.net account can grab a coward "no responsibility" email account and moan about every little thing the other people who actually have a reason to do something do.

At least on eBay, when people bid they usually want to buy the item. You can either bid or move on. Unlike the newsgroups, where you always get the idiots who know nothing and downtalk, or the price cops who see it cheaper somewhere else and have no respect for the fact that someone probably would have paid the price and been happy. So what? why ruin the seller's day? shit, that's what it all about, get what you can when you can. buyer beware. I paid too much for some things, yeah, and you don't hear me complaining. It made me learn quickly to do lots of research before throwing money around wildly like this bucktoothed retard who keeps carbon copying his reply to your posts.

Das it, I'm out-
Joe

Hello,

I am in the process of buying a minivan for my wife and kids. I would like to install a quality CB radio in this vehicle. My primary vehicle (Ford F-150 Extended-Cab) has a nice CB rig installed... a Radio Shack TRC-485 SSB radio with a Wilson 1000 antenna mounted top dead-center of the cab. I am very happy with its performance. I would like to get the same (or close) performance from the setup in my new minivan. The only problem is space.

I need a small (compact) radio for the van. I would like a quality radio with SSB if possible. Anyone have any good brands to recommend? Radio Shack does not make the TRC-485 anymore so that is out of the question. And, the new radios in the RS catalog look like cheap junk. Uniden radios look "ok" but don't have any compact SSB models. Any recommendations?

Next, the antenna. The new minivan will be garage kept. This immediately rules out a Wilson 1000. I don't want to use a thru-the-glass mount because of the poor performance. I was thinking about drilling a hole and installing a ball-mount on the side of the minivan and installing a top-loaded fiberglass whip that would protrude above the roof line enough so that it clears the garage door. Anyone have any other antenna recommendations or mounting opinions?

Thanks!

--Steve

You guys have got it too easy.
The last time we left work early because of snow,we got 10 inches in less than 8 hours and they left us go half an hour early.The next morning when I went to work there was 22 inches in my yard.I did get to work fifteen minutes late.
We used to lose power a lot here.The power doesn`t go out much any more, it just kinda flickers every once in a while.
Be careful with that shovel. Don`t hurt yourself :-)
I was just bustin your chops.
Stay warm and dry

Hi,
I have owned both, they both can be moded for freq and slider the 696f is more stabler as far temputure from worm to cold but after the Grant is up to temp its good you don't have to cut anything in the 696f just turn up mod pot and it will work well the Grant need a little moor work to be real loud, but can be very loud. they both have good ears but the tone of the recieve is a little different i like the Grant Xl a little better, I use a K40 for a antenna and it sounds good with the grant at 60mph in the car going down the hiway both have good noise blankers and anl to surppress unwanted noise.

The problem in North Carolina is not really the foot of snow. Its a combination of ice on the roads, mixed with a generous helping of overconfident 4X4 drivers.

Once all of them get in the ditches, it is safe to venture out. (grin).

Thats a small part of the problem. The real problem is the state waited too late to get started cleaning it up. There have been 18 wheelers and tourists passing through stuck on the interstate 85 with little or no food, for over 18 hrs with no help in site until today around noon. Some were stranded since yesterday morning. There were reports of the national guard going to help, with hummers, etc, but there was no sign of any help, as the state of NC wasn't at all prepared for a storm of this calibre, since the last one I remember with snow this deep was in 1964, the Guard had little experience.
As of today, the roads are now clearing up, as the scrapers that they did have haven't stopped since starting yesterday.
It just seemed that there was nothing being done, and after all the graders they had did all they could,and the snow has stopped falling, now the effort is being seen. Kudos to all that did help.

Source record: 21789

Another knwo-nothing heard from...

Opps, sorry, you are correct, RS doesn't make anything. But Tandy sure does. In fact, Tandy makes a lot of stuff for other companies, where it's sold to consumers under other name brands. I don't know what the current count is, but I think Tandy still has about 11 different manufacturing concerns, just in the Ft Worth area, not to mention subsidiaries around the country. Gavin Electronic, RCA Antennas, Memorex.... Should I go on?

And then know-nothing idiots sometimes even compare products and call the RS unit low rated and the competitior high.

In fact, a number of years ago RS bought a 'high end' audio product from a certain audio manufacturer. It was sold with the Realistic namebrand. But it really was a 'toned down' version of the other companies product. Then an engineer at Tandy designed a MUCH better unit, that could be marketed for about 1/4th the existing retail with much higher profit. Merchandising switched, but raised the price since they said it was way too cheap (to about 40% of the other unit). It was a MUCH higher quality unit, both in performance and in the manufacturing. Well, the original company came back and wondered why Tandy wasn't buying their any more, and when told, wanted to see what Tandy designed. They liked it, they bought it.

Now, you had the original unit at $XXX dollars and the RS version at about the same $XXX dollars. Suddenly you had the RS NEW version for about 35% of the $XXX dollars in a nice setup, and the EXACT SAME UNIT sold by the other company, but in a nice looking wooden case (with no P/S shielding!) for about $XXX plus maybe $50 as an 'improvement'. And it was, the new unit BLEW away the previous unit. In fact, it blew away a THIRD very 'trendy' unit for about twice as much from a 'yuppie popular' name brand. And one of the leading audio magazines said so, quite excitedly in fact. But they refused to look at the RS unit. It was 'junk'.

Amazing how people can be fooled when they know-nothing.

Look for some facts before you speak Duane, it only makes you appear foolish when you make mistakes like this.

Come on Cap'n, a petition for rulemaking does not make it so, no matter how much people would wish, so don't get anyones hopes up.

In fact, the 'restriction' on range is what makes CB possible, in the eyes of the international treaty. Since CB is 'declared' to be a local communications authorization, it is technically exempt from the treaty that requires morse code for 'citizens'. Of course, you could also get around the treaty with other loopholes, but I suppose the powers that be decided this was one of the easiest at the time about 40 or so years ago.

the reason is that the laws are enforced much more vigorously snd swifter there
along with harsher sentences.
this is why we have a higher encarceration rate here. we take in the criminals
and feed them, give them a warm bed, cable tv, excersize gym, a law library
that any lawyer would be jealous of so they can file frivolous law suits
because the food doesn't meet their religious standards, ot they can't have
cerimonial swords to practice their religion properly among other bullshit.
the criminals figure in the cost to profit ratio's of their crimes and figure
that it might cost them 30 days in jail with a plea bargain for rape or
domestic battery and think it's worth the risk.
if the penalities were much harsher, the cost to them will go up and they will
think twice before the do the crime.
they still cut the hands off from theves in pakistan. needless to say, their
theft rate per capita is probably much lower than here.

I went from using a TRC-485 to the Eagle Sidewinder 400. The 400 looks exactly like the TRC-485, there made by the same manufacturer. The Sidewinder has all of the same features as the 485 plus 360 more standard channels including the 10 meter band, FM, a better clarifier, a 5 khz switch for even MORE frequencies, a sturdier 6 pin mic connector, and a stock mic that has a speech processor with channel buttons. Get the Sidewinder for your truck and put the TRC-485 in the van.

> Jeff, you need to step outside and take a good look around. Yes,
>unemployment is down, but so are wages. Two people are having to work
>today to live as well as our grandparent did forty years ago with only
>one person working.

yes wages are down but that isn't the fault of the govt as much as the fault of
big business. i work for a large, multinational company.
they are always telling us how much ahead of our competitors we are and how
much ahead in profits we were last year we are and when the question is asked
about how much our yearly raises will be, they start crying in our beer about
the competive business climate, the fact that we are working to fatten the
stock holders pockets and the cost of doing business.
it seems that with one simple question, the whole economy went to hell.
this isn't govt., this is greedy big business.
as for two people working, at least two people can get a jom at all. if
inflation were high, 2 people couldn't get a job.
this is how the federal reserve bank works to raise or lower interest.
if unemployment is too low, hireing becomes a bidding war and the cost of
labor, read products and services, goes up.
they raise the interest rate to slow down business spending, read hireing /
speed up lay offs, raiseing the unemployment rate hense people are willing to
take lower wages when they finally do get a job.

> And, if inflation is so low, why does everything cost so much (and
>keeps getting more expensive)?

again, the bidding war effect. as the cost of labor goes up, so does the cost
of products and services. the govt, does smile at this to a point as the sales,
business and income tax income goes up, read the 1,9 trillion dollar budget
surplus, but when things get out of hand, they slow things down by raising
interest rates so business will borrow less money and be less agressive with
hireing so the unemployment goes up and labor becomes cheaper once more.
if you don't believe this, either read the business section of your news paper,
whatc CNN business news or look up the federal reserve board web site.

>Yes, electricity does cost less today,
>but we pay far more after the endless fees are added (these fees are
>often not added to the cost of goods and services).
>

this is mostly local govt with their franchize fees.

> Welfare reform is a total joke. All Clinton did was order government
>agencies under his control to hire those people kicked off welfare.

personally, i would rather pay people to empty trash cans in the welfare office than have them stand in line to, IN SOME CASES, take the money and go buy a 12 pack and go home and drink it.
THIS IS NOT TO SAY THAT ALL WELFARE RECIEPENTS DO THIS.
there are some people that are on welfare who can't work because of physical disability and really do need it.
for myself

THIS IS PART TWO BECAUSE I HIT THE SEND KEY TOO SOON.

> Welfare reform is a total joke. All Clinton did was order government
>agencies under his control to hire those people kicked off welfare.

as i was saying, these people deserve it but in the areas of NY and FLA where
i've lived most of my life, i've seen the stereo typed welfare beer drinker all
too often.

>result today is a government that runs even worse than it ever has (if
>that is even possible).

this, i must admit is true in some cases.
if the gove would institute decient training programs, this wouldn't be true.

> And yes, the stock market is up. Big business is doing wonderful -
>profits are at an all time high. I'll celebrate when I get some of
>those profits.

i answered this in my last post.
in the news today, there was an artical that coca cola was laying off 6000
people in a restructuring that would save it millions. mind you, this is a
company that brings in $14,000,000,000 a year. the only reason they do this is
to make the stock holders happy.

>
> Yes, we're doing better at the moment than Russia and China. But
>every other industrialized country in the world is doing better than us.
> Too bad those countries don't have better immigration policies, I'd
>leave in a heartbeat.

if you think we're a welfare stste, look at Briton and sweden. the taxes are
oppressive. in england, there is a 14% value added tax on everything you buy.
just imagine paying 14% sales tax on that cobra 148 that you may have your eye
on.
the herion addicts in briton get herion and needles free from the govt there.
in sweden, you are guaranteed a pention no matter if you work or not. the
pention fairy doesn't leave this under their pillows. taxes pay this.

> Of course, that is perhaps why they are doing so well, the politicians
>in those countries worry about their our citizens first, before opening
>the flood gates to massive immigration.
>

this is the one thing that i agree with 100%.
jeff

This storm caught the forecasters by surprise! As a result (according to Gov. Hunt), all the Nat'l Guard equipment was in the mountains where it usually is needed most.

More equipment (and 500 tons of salt) was due in the Raleigh area today. Last night, DOT was running out of salt and sand.

Dan,
>interesting post , i must say old chap, but i didn't know that
>entrepreneurship was encouraged in the old country
You jest!
> , considering you have a
>85% tax rate on income
Where are you getting your facts from? Our highest rate tax break is 40%
for people with a gross income in excess of, I believe, 80K USD approx.
Normal tax rate is 25%.
Our government screws us via heavy indirect taxation.
>, but whatever. so you say you found a russian beauty
>and you married her. well i think , in my opinion you made a error in
>judgement. i have met these russian beauties , as you say , over here, and
>to tell you the truth , i think , for the most part , they are a bunch of
>hustlers.
You're generalising. My wife has never hustled. She worked in the
Russian stock exchange! Maybe you'd call that hustling.

I will say one thing, and that is to be very careful of the girls from
the big cities, Moscow, St Petersburg. Many of them are after a passport
and a fat bank account. There again many women are after the latter!
They don't have to be Russian.
> now , it can be said that before they see how people live in other
>parts of the world, sure , they are innocent and nice. but russian babes
>learn fast and i will say that i do not trust them as far as i could throw
>them. for curiousity's sake and you certainly don't have to answer this
>question , but what was wrong with a good old english laddie?.
I lived with one for six years prior to my current girl. She had a
rather close and interesting relationship with a fella called 'Bells' as
in the whiskey!
Have you tried to have a rational conversation with your woman while
she's under the influence?
> some of your
>babes are real nice, at least in my opinion. to me there is a great gulf
>between russian culture and white european culture and for all its worth,
>heck, marriage is a tough ticket these days anyways , and sir, i do ,
>really i do, understand , the frustration all these gents who are looking
>for love and can't find it, but you have to be the person you want to meet .
>and to me , these guys who go somewhere else looking for a woman are a bunch
>of loosers anyways, and what tops it off is these guys think they are going
>to hide that fact by getting a 'innocent babe' from russia.
That's why I found a woman from the countryside, 500Km away from the
corruptive ways of the bright lights. After the stock exchange she
became manager of a ferrous metals trading company. From the start she

negotiated with her boss for a percentage of any deals she closed rather than a salary. She did not have a bad life and knew she was not getting engaged to Bill Gates or Richard Branson when we tied the knot.

My life is far richer with her. She does not look at any other man though plenty look at her. She is a brilliant cook, wonderful company, very economically minded and divorce is not in her vocabulary.

Maybe I've found the exception.

Let's get back to alternators and amp's?

Hey everybody
I run a DX99V off of my base every now and then, and last nite my Silver Eagle got pushed under another radio and wound up being keyed up for no more than 40 minutes. But, i came back in the room to find it was lights out on yonder Galaxy. I had it set to dead-key at 3 watts, and the room was empty, so i'm guessing i had a weak protection diode. I dont have schematics for it so im hoping anyone who works on these regularly can help...
For now, im pretty sure d93 (1N4004 diode) is for protection, and will order it in the morning..If anybody can help, ill UPS you a six-pack (hehe)
Thanks for listening guys, see ya .

> big business.

But government can have an effect on how big business operates. The government already has one tool to do this with - the minimum wage. By my calculations, to keep up with inflation, the minimum wage should be about $18 per hour. Obviously, it is not even close to that.

By the same token, to control prices, the government can reel in big business, and force more honest competition (something we do not have now).

Don't misunderstantd me, Jeff. I hate big government. And I hate the idea of government getting involved in most things. But, this may perhaps be one thing that only government can solve.

> personally, i would rather pay people to empty trash cans in the welfare office
> than have them stand in line to, IN SOME CASES, take the money and go buy a 12
> pack and go home and drink it.

I don't see the big difference. Now, they hang out in an office all day, and then go home to buy the 12 pack. But, they're also taking a job that could have went to a person that really wanted to work. In my opinion, they should get neither (welfare or job handouts). They can enter the work force just like everyone else. And, if they get fired because they are too lazy to work, they can simply starve on the street.

I know that may sound cold, but that is what will happen if I lose my job. I don't qualify for welfare (no kids), and nobody is going to give me a job handout (not a minority).

No, what really needs to be done is to hire and fire government employees based on job performance. Right now, once a government employee is hired, there is very little review of job performance. And very few are fired because of poor job performance. Today, a government employee can be totally incompetent, and totally lazy, and still keep that job for thirty years until retirement.

Even pay raises are not based on job performance. Pay raises for government employees are based on time in service. All a government employee has to do is work just enough to not get fired (not hard to do), and the pay raises will come each year.

Anyway, we basically agree on most of these things, Jeff. We may have slightly different slants to justify our conclusions, but we're both heading in the same general direction.

Take care.

Ahh, this is one thing that drives me up the wall. I simply cannot stand to see how well criminals are treated in this country. In many cases, they have it better than the average citizen. For example, in some "correctional institutions," the criminal is allowed to get an education while locked up (at taxpayer's expense). At the same time, many taxpayers are going into debt to pay for their kid's education.

You even see criminals with life sentences getting a college education, when there is absolutely no way they are ever going to be able to use that education. Why waste a good education on a person that is never going to work a day of his/her life?

If it were up to me, the criminal would get none of these things (no tv, books, magazines, excersize equipment, family visits, etc.). In fact, they would only get a few moments out of their cell each day. The rest of the time, they can sit in the cell and stare at the walls.

I think the "mb" and "mc" marking on the chip confused some people.

But there really was nothing in common with uniden and cybernet chassis
other maybe sourcing parts from a common supplier once in a while.

Look at an early cobra 40ch or late 23ch and some Radio shack (uniden
chassis)
compared to DAX, Midland, RCA, Hygain, JC Penny etc (all cybernet chassis)
WORLDS of difference !!

Or look the specs up in the PLL Data book......

Relax, my friend. I was just having a little fun at your expense.

However, I happen to know that most of the south considers a half inch of snow to be a major disaster (schools and businesses close, traffic grinds to a stop, etc.). I was just pointing out that there are many parts of this country that would consider your "state emergency" storm to be totally normal weather.

Of course, that is not a put down of the south. Since bad weather is normal in the other places, they are more prepared when a storm like this hits.

> 5 khz switch for even MORE frequencies, a sturdier 6 pin mic connector,
> and a stock mic that has a speech processor with channel buttons. Get
> the Sidewinder for your truck and put the TRC-485 in the van.

I just looked at the specs for the Sidewinder 400 on Copper's website
and it clearly states that the frequency range of this radio is 28.315
MHz to 28.655 MHz (the 10-meter amateur band). Citizens Band is in the
26.965 MHz to 27.405 MHz range.

Are you saying that this radio will work in the CB range? How do you
tune your antenna for this type of operation (the full 10 and 11 meter
bands?) Does the Sidewinder have "channel" display as well as frequency
display? (I.e., channel 1 is 26.965 MHz)

Thanks for your help.

Much appreciated. Not much moving on the roads. If you do make it to a grocery store, there is nothing on the shelves.

If we don't get restocked before the next blast, a bunch of folks will be running low on food. Looks like Friday is our window of opportunity. With temps ranging from 32 down to 11, the roads are remaining very icy. If it stays sunny today, we might be able to move around Friday afternoon.

>though.... Good Luck. KT4ST

I recommend the Gordon West Code tapes and study guides to everyone who asks... an excellent choice! His Code tapes may be a bit corny, even goofy, humor-wise, but his method of learning CW is the best I've come across. Once you get 5 words per minute done, the fastest way to any increase in speed is on-air QSO's using Code. His study guides for the written exams are also excellent, as they give you each of the questions with the answer choices listed below, and immediately following, the Correct answer and an explanation of WHY it's correct. The ARRL's study guides are textbook format... they make a decent shack reference (buy an ARRL Handbook instead) but SUCK as a study aid.

The Gordon West series is available at most Radio Shacks, BUT BEWARE! I've come across many Radio Shacks selling outdated study material over the years.... be SURE that what YOU buy is recent and meant for the exam you intend to take.... You have no Idea how often I've had someone at an exam session tell me "... Man!... Most of those questions weren't in MY exam book!... Where did they come from?..."

you already have a good radio you might as well shoot for a good antenna. try www.firestik.com they got a good assortment of excellent antennas. if its your vehicle your worried about try using a hood/trunk antenna mount. the holes for that mount are drilled on the inner lip of the trunk/hood. good luck

see there phil ,that is what i am talking about,
they always want to go home. russians miss the
mother country and when they get out of it , it
takes them a long time to get over it, especially
for russian women. i feel for them . i really do.
but give me a good looking american girl anytime.
i am not going to be a vehicle for a charity case.
a lot of these russian women are desperate to get
out of that place and i do not blame them, but for
this reason and others to numerous to mention , i
for one will not allow myself to be pulled into a
situation which i feel would be detrimental to
my well being, you know having to wet nurse some
foreign woman , who looks good probably , but so
what . what are the costs, that is my question and
are they worth it. probably not. we yanks welcome
your appearance at out beloved keydowns and i will

tell fatso to make sure that your name is called
at the ball, he , he......curious dan is out.....

friend you have no idea of what you speak , so i shall humor your absurdity by being absurd. now then , i ask you again. what did you do with that radio equipment? i mean you are talking to a man with the plan here and all i am getting out of you is trash talk. i am interested in the 32 pill, seriously , but if you have already sold it , let me know. i shall not drop the issue until i get a satisfactory answer from you on this matter. i am the eyes and ears of cb radio nationwide and i want to know and inquiring minds everywhere want to know. so spill the beans prozac. i mean, you got into cb radio, got your ass in a bind with somebody, then it got hot in the kitchen , and what do you do, bail on the issue. the beast from the east , bam bam bigalo, says you jersey boys don't run from nothing. but i guess he must have been talking about other jersey folks. so prozac, i say now , that you sir were not a cber anytime in your short lifetime. such things as you got into, are so commonplace that they do not bare repeating. one of these days ,prozac , you are going to grow up, but until then, well , you shall continue wondering in the desert. this is curious dan and i am back out....

Well i guess all the crying is all over, regurding my last (funny post) I guess all i want to do is share one of the more humorous replys i got.....I had this one fellow that told me that he knows ALL the people that bring the Galaxys into this country, (pretty important guy Huh?) and he said that (of course it's too expensive) BUT he also was nice enough (stupid i meant) to inform me that if and ONLY if i was asking 200.00 dollars or LESS then (and only then) would the radio be a "good deal " (i guess it would, don't you think?) i was at a loss for words, so i figured I'd give my self a week or two (to try and digest) his reasoning which by the way (im still digesting it) but if ANYONE (newbie or NOT) were to hear this they would have to laugh......no?.. you can't even find a used export mobile (with sideband and extras) for that !!!!! not MINT anyhow, but it occured to me that i guess all the people that cried about the price being too high were ALL people that were much fairer than myself (i guess) ??? it also dong'ed on me that this MUST be a good thing.... if i ever need to buy radio's in the future, THIS MUST BE THE PLACE TO DO IT !!!!!!! if all these people are selling thing's for so much cheaper than me i SHOULD be able to pick thing's up (for next to NOTHING) right? WRONG !!!!!!! i see posts all the time advertising stuff thats almost laughable (condition wise) and their asking retarded prices for it, so i said to myself (Frank) whats wrong with this picture? (why am i receiving so many comments from people saying i was a crook, and nuts) the ONLY answer i could give myself (Frank) was that they MUST be bull shiters or even bigger crooks than i could ever be) so after all of this exhaustive thinking i said to myself (Frank) " don't sweat it " the Saturn is paid for, your not in the need of ANY money, It's really a nice radio, you didnt get ripped off on the price when you bought it, and it's not costing you any money to keep it, so " don't worry..... be happy " and I am, im very happy, as a matter of fact I went out and bought myself another Astatic D-104 SE desk mic for it (oh and by the way, i paid 65.00 dollars for it guys) ....did i do ok on the price? it is NEW, so i guess im going to use it like it should be used (it is a beautiful radio) (very loud and clear too) so folk's i will continue to read the posts for equiptment for sale, laugh my A__ __ off at all the exemplarary " knowledgeable " and "connected " people that are selling THEIR JUNK for exorbatant prices, and thank god for NOT selling my Saturn to ANYONE who cant appreciate what a "virgin" immaculate, and great talking radio is worth, (in the real world) I certainly did learn one (1) thing......this news group is NOT a total loss, i DID get quite a few responses from people that agreed on what i was asking for it, appreciated it for what it was, thought it WAS a fair price, and HAD their brain cells still in tact. (thank god)!!!!! to the folks that were supportave..... thank you, and i wish you and your families good health, fourtune, and great success with the future of your communication's. Sincerly, and respectfully yours in this GREAT hobby.....Frank in CT....73 !!!!!!!

I had one a fue years ago and all the mods you could do to a 2000 could be done to the 2010
it has the148Z13 board in it but does need a chip switch for freqs change 8734chip to 8719chip
radio tunes up like 148 but uses a condencer mike so you may want to check resistance of mike gain resisters and drop risistance to 10k or lower to get radio to work to max potential. Good ears and worked well for me after did mods to it. 73s Oldtimer

Aw Frank what a bummer. I was going to offer you the full price that
you asked for the radio, I would have paid the shipping cost, thrown in
my AMD K7 700 MHz computer which has 512MB of RAM 50 gig SCSI hard
drive 64 meg graphics card and is overclocked to 1 GHz. You could have
had my girlfriend (who incidently has knock out good looks)(well she
did 20 years ago) and the 2 kids to look after you, just toss them a
scrap of food now and again to keep them happy. And wait for this Frank
the Rolls Royce that superb feat of British engineering (which sadly is
now owned by the Germans) which costs about 120 of your dollars to fill
with gas in this overtaxed country of ours and would cost only about 15
dollars in yours, this could have been yours also.
I would have thrown in my catering business as well Frank but you
haven't done anything wrong to me and nobody deserves the grief it
gives me. Still never mind Frank next time you wish to sell it just
drop me a lil ole Email and perhaps we can do a deal. Happy DXing

> Thanks for your help.
>
> --Steve

To me the Sidewinder is a piece of crap,not REALLY a CB and not REALLY
a 10 meter rig either.It is meant to be sold to CBers who don't mind
running illegal equipment and then sold as a 10M radio to fool the FCC
or at least slip thru a loophole.
A 102" whip will work 10 and 11,just tune for the freq right in the
middle of the freqs you will work.I use this technique with a 102" and
use it on 10,11,and 12 without retuning.

The Sidewinder 400 is a "best bang for the buck" radio. Either you hate it or love it. I happen to like it!!! I can go from 25.165 all the way up to 29.7XX, in AM, SSB, or FM with my Sidewinder 400!!! The radios not to shaby in the power department either, peak power is 18 watts AM with a 2 watt deadkey, 35 in SSB and 15 in FM. My "little" Sidewinder keeps up with the local RCI 2950's, NO PROBLEM!!! I have 2 Sidewinder 400's, a modded 79-290, Cobra 25, and a Uniden PRO640e. The Sidewinders are my favorite!!!!

I agree. These darn ebay auction "announcements" are showing up everywhere. Almost every newsgroup has several of them each week. In the beginning, it was just an occasional thing, but the number of these ads is growing rapidly.

There are newsgroups set aside for advertising used merchandise. If these ads belong anywhere, they belong in those newsgroups. Some might even argue that they do not belong there. Whatever the case, they do not belong in the discussion newsgroups.

: Anyone know anything about this radio ? Motorola MCS2000
:

It is the handheld version of the series of 800 Mhz trunked radios.
The unit is about $1650 each for Model II (alphanumeric display
and keypad). Model I is cheaper (about $900) with less features.
Very flexable radio for trunking.

The MCP2000 is the mobile unit.

Got one to sell?

BTW, this is becoming the standard radio for police and public
safety.

Does Seattle count as a large enough city, Tam? I listen to the local repeaters many hours each day (I'm scanning them right now), and I've never heard any problems on the local repeaters.

In fact, I've lived in four parts of the country in the last three years (South Carolina, Texas, Indiana, and Washington), and I cannot remember a single instance of trouble on the repeaters in any of those areas. I've heard a wide variety of conversations (politics, social issues, and chit chat), but no serious disagreement.

Where are you located, and what is wrong with the people in your area?

I have WAY too many novar (9-pin) tube sockets, so I'm selling my excess.
These sockets fit 7868's and 9-pin sweep tubes. They are saddle mount, with
solder tabs (not the cheesy PC type).

I'm asking $1.50 each (minimum 10), or 100 for $125.
In case you want to see what they look like, there is a picture posted at;

http://members.aol.com/Reactor001

Interested? Please respond by email (remove "nospam")

From: CodysPC@Iserve.Net
Message-ID: <388f8310.437624415@news.iserv.net>
Source record: 22014

Greetings!

Actually, it can work as a method to know how far the vehicle following you is.

How it works,

As you drive at a comfortable speed, another vehicle will race up behind you.

As you see the front of the vehicle getting larger, and then filling up your entire rear view mirror, you can begin acceleration.

Once breakaway has been acheived, the antenna is fall behind your vehicle, and you'll notice in some installations that a loud "THUNK" and a gentle scraping sound is also heard.

To determine distance requires you to know the lenght of coax this antenna uses, including overall length of the antenna, whip and mount thickness.

The true length will then be known by observation in your rear view mirror as the antenna and the coax extend behind your vehicle.

As the vehicle behind you gets too close, a series of events can happen...

The coax becomes taught for a few moments, and a loud snap or glass breakage can be heard, this is effective only if you own a four door and mount the antenna and route the coax thru the door jamb.

If this doesn't occur, or you've routed the coax via different means - you can actually find the radio - including the microhpone, the entire antenna, mounting brackets and part of your dashboard exiting out a small elongated hole formed by the friction of the coax being held taught as the wheels of the approaching vehicle behind you.

The results could be interesting.

For a cheap thrill - nightime viewing of this event produces numerous sparks as the abrasive elements of the asphalt come into play.

FWIW...

A brand of fiberglass antenna, can be found in most Truckstops and Cb shops.

There main physical feature that makes them different is the wire is INSIDE the fiberglass not wound around it.

I have found it makes them a little harder to break, and also a little smaller diameter.

Tam

This is 123 out of IL.
I'm ON LONGER WITH X-FORCE AT ALL!
So if you all were trying to figger out were I had gone to. WELL I QUITE
X-FORCE!
I have a new line of amp's.
The name is as you can see MOWATTS
By Bulldog & Me.
We have better prices and I put together
A better line of amp's.
for the people that talks skip or run's comp.
So if you need it I CAN DO IT!
I'm not going to "Slam" the X-FORCE
amps because "they were me anyway"
But I will say the MOWATTS amps
are "RUNNING BETTER"
I've made my changes to the amps and
they are running cooler and have tuns
moore audio!

THANK YOU.

Source record: 22041

Once you get them tuned on the 50 ohm wire and hook them together if you find your swr go up. Unhook one antenna. Hook the 50 ohm wire up to one antenna. Run it in and to the back of the radio. You done. Use the second antenna for a dummy antenna. Co-phasing antenna's may not always work. That is the best solution. Or get an antenna matcher and keep it in line. Just don't run any power through it. Ususally tears it up.

Good Luck.
God Bless.

We just sent down 50 of our electrical crews out of Haywood Co. They will help get you up and running for those out of electricity. Got another one heading in this weekend. The way the wind blew up here yesterday it looks like its going to push this all your way again.

Hunker in and get some supplies. You may be in for it again.

Good news. Those stupid kids out here are on their daddy's snow mobiles. Looks pretty funny when they are on the side of the road at night with their headlights on towards you and you have oncoming traffic on the other side too. I stopped in the middle of the road the other night because I didn't know what was going on. First think I wanted to do was get out and ring both of their little necks then haul them in to their Daddy for road rules and how to be safe out there in the dark.

Oh. got that off my chest.

Take care.
God Bless.

If you havn't taken the time to check out the message board on the CB City website, you may want to take a look. It is getting anywhere from 300-500 hits per day and is rapidly becomeing one of the most popular message boards on the net dealing with CB Radio gear.

If you have something for sale, something you are looking for, or just need information, this message board is where you ought to post your messages.

I am not just trying to just lure you on here, if you check it out, you will see that it is a very popular message board. A lot of people have book marked the board and go directly to it all the time.

I hope everyone is staying warm out there, and if we can do anything at all to help you in your radio needs, just let us know.

I don't really care if you take me seriously or not...

But if you want examples... Didn't you read the post?

ie > >Gavin Electronic, RCA Antennas, Memorex.... Should I go on?

And I suppose you think Tandy contracted out all their computers over
the years?

You seriously don't think Tandy builds anything? Just get someone
to look in a Ft Worth phone book for "Tandy xxxx" not the corporation.

Mike

What state is Keyport in, Prozac? And how big of a city is it?

In some states, I don't think Flemming would have even been arrested
for attempting to protect his property. He only fired into the air (a
warning shot). He didn't actually shoot anybody. And, if I understand
the laws correctly, in some states you are allowed to shoot someone who
enters your yard with the intend to do property damage.

Dwight Stewart

Agreed, in"88 we got a much worse storm in NC, 18 inches overnight. Seemed ike
they were much more prepared for it and eveyone knew it was comming. When I
left for work at 5AM that morning the snow plows and salt trucks were already
at work.

What's an MCP2000? European version?

I have two MCS2000 Model I Smartzone 900Mhz and they are VERY similar to the
MTS2000 portable that I have. The MCS2000 is a MOBILE.
My company has five of them and we were one of the first places to get them.
Serials are less than 200. They were major buggy and had to be 'upgraded'
several times by Motorola before getting them fixed. They are VERY good
now.
Nice radio all around, but I like the Spectra series better. Too bad
Motorola orphaned that line.

4219. MB8719 PLL

Newsgroup: rec.radio.cb
Date: 2000-01-27 00:00:00 UTC
From: "Christopher G. Petty" <sideband@cac.net>
Message-ID: <3890F9FF.1075B72B@cac.net>
Source record: 22118

Does anyone out there have pinouts/specs on this PLL? I'm finding myself trying to reinvent something similar to the old Dynascan "channel" selector which used to be available for Cobra 148/2000 and the Uniden Grant XL, but I've run into a brick wall trying to find specs on the PLL. Any information on where I could find specs, or the specs themselves would be greatly helpful.

Thanks in advance.

From: "Christopher G. Petty" <sideband@cac.net>
Message-ID: <3890FDB7.4F7D1464@cac.net>
Source record: 22119

Ok.. Take it from a truck driver.

Coax length plain doesn't matter. In the truck, I have my GrantXL, with 9 inches of coax to an ARES recieve amp, 2 and a half feet to my linear (Don't jump down my throat, I'm studying code to get my HAM ticket), and somewhere close to 7 feet 3 inches to the dipole antenna on my passenger side mirror (Two Wilson Silver Loads up and down, center lead to the top one, braid to the bottom one). All of the coax is RG8M 97% shield. SWR at the antenna is 1.2:1 on 40 and 1.3:1 on 1 (1.1:1 at 27.555). SWR at the recieve amp (between the receive amp and the linear) 1.5:1 across the board, and SWR at the radio is 1.5:1 across the board. I've tried the 3 foot lengths for jumpers method, and the SWR was no different. All that did was jumble my dash up with a bunch of coax that didn't need to be there.

So from a real application standpoint, it appears that coax length doesn't matter.

As for RG59 and co-phasing, coax length, again, doesn't matter, provided each side of the co-phase is identical in length.

Just a dumb truck driver's input.

A well-built magnetic mount antenna can perform just fine. The key is
finding a well-built one. You might want to check out the Wilson or
K40 antennas. The mag mount versions of these popular antennas are
known to perform very well.

Of course, if you're having reception problems caused by vehicle
noise, changing antennas is not likely to solve the problem. You need
to figure out how to get rid of the noise. And, as for transmit
performance, make sure the antenna is tuned properly using a decent SWR meter.

Memories are for LAZY people. Yes it does split. No CTCSS tones but since I don't hold an amateur license I wouldn't need them for repeater use anyway. If I was a HAM and could use repeaters I'd get another version of the Sidewinder400, the HTX-10!!!!!!!!!! Like I said before, there are 2 groups of people. Those who like these little loaded inexpensive radios and those that don't. I take it you have a bad opinion about the TRC-485, Sidewinder 400, and HTX-10 type radios. Well opinions are like ASSHOLES, everyone has one and YOURS STINKS!!!!!!!

I ain't going no where. Up here in Canada CS are expensive
enough as it is. I have an uncle that is a ham and
complains about the traffic. So why buy more expensive gear
to hear more traffic?

Source record: 22132

I have found that mobile installs do not always make sense
SWR is only 1/3 of the equation in the setup. Did you check
your watt meter with the different lengths... I bet there is
a slight difference. Coax length also changes the Voltage /
current ratio at the antenna which changes the angle of
radiation and the lobe sizes.

For the third time, see...

Study the following sites in the order listed. They better
explain than I...

http://www.iserv.net/~codyspc/cbindex.htm scroll down to
antennas
http://www.pantherco.com/radiorepair/mobile_antenna_fundamentals.htm

There may not be any in your area, But in the Bay Area there were a few repeaters (Jamming Repeaters) that were concidered CB Repeaters. Even one of them with an HF Remote Base would do a full duplex link on CB Channel 17 just for fun. These repeaters werent causing havoc on any other frequencies than the ones allready disturbed therefore these people that hung around on them pretty much stayed there and didnt migrate to other frequencies or bands. They were in fact different, but were still very smart hams and there language was not to be desired. From what I know of the above systems, They were started as a respected system but due to disputes like here on the NG's, the repeaters turned into a freak of Ham Radio. Most of these systems are now getting a good reputation for being a select community of individuals that are a little more lax and not being bootlegger material. I commend the new owners and new users for making them better than CB and appreciate the humor on those systems that you wont find on the other repeaters. They are no longer considered Jamming Repeaters or CB Repeaters.

Personally, I wish some of the idiots I hear out on the air, who purposely interfere with CB communications, and truck drivers' ability to get local information to get their loads to where they need to be, would go off someplace else. It's a daily stress that a driver doesn't need, on top of dealing with people riding in our blind spots, passing us on the right, blocking us off from the exits we need, etc. It'd be nice if some of them would just "go away" to another frequency and let us do our jobs.

But what do I know, I'm just a truck driver. ::grin::

"VERY good" compared to what ? A Kenwood ? The MCS2000 is a flimsy piece
of plastic junk ! Unfortunately it reflects the attitude of the new group
in charge at Motorola - put out cheap, poorly thought out low cost, low
end junk to compete with the proliferation of inexpensive mobiles put out
by other companies.

> Nice radio all around, but I like the Spectra series better. Too bad
> Motorola orphaned that line.

Well, not really, the Astro Spectras have picked up the torch. Also
I believe the regular analog Spectras are still available on a 'per
customer' basis. (ie. if you yell loudly enough, you can get one).

> > BTW, this is becoming the standard radio for police and public
> > safety.

AHAHAHAHAHAHA....you wish ! it's a piece of shit radio, the only
agencies that are buying into them are the ones that can't afford
Spectra's !

Anyone that thinks a 110 watt A-9 Spectra with INTEGRATED siren
packages, INTEGRATED vip capabilities, and Astro IMBE capability
is inferior to a flimsy piece of plastic, that uses all kinds of
hideous add on kluges to achieve the same things a Spectra does,
is smoking crack ! Also let's see an MCS2000 do OTAR, it ain't
happening !

It's a junky piece of shit ! If you have a say in it, insist on
a Spectra !

LONG LIVE SPECTRA/ASTRO SPECTRA !!!

From: "Don Bertone--qrz.com KK6AN" <dbertone@flash.net>
Message-ID: <3891A859.93108892@flash.net>
Source record: 22075
Body handling: Binary attachment payload not displayed: dbertone.vcf

We members of the Wally-Wally Club are anxiously waiting for the onslaught of a new batch of hams, licensed and not. The 40 meter War Zone will sure be hopping then.

All are welcome to join in the fracus that goes on every day. It used to be a LOT wilder but we all have jobs now or have died.

Weekends are active but with all you new guys showing up it will be bedlam!

The War Zone typically is between 7.258 and 7.255 but moves around. It is usually on either of those frequencies so tune your radio to the middle, about 7.2567 and you will hear the SSB splatter when one of them becomes active

[One or more binary attachments are retained only in the source text.]

1) all you can give it.
2) 90 is a bit small. With lights on heater on and wippers
on. A 200 watt will be pushing it with out drawing battery
reserve. Thats over 24 amps with the radio keyed too.
Cheers,
John

Thanks to the both of you. Picked it up for a steal. About 8 months old and clean, clean, clean. Came with an echomax 2000(not to fond of them) and it squeals like a pig at all settings, even with gain off and effects off. Put my astatic hand held d104 on it and it's perfect. Stock mike screams on it also. Leads me to believe the mike is garbage or at least needs work. Have a night eagle I plan to put on it as soon as I get it repaired. Damn plastic key bar inside keeps coming unglued. Anyone have the modification to clip the modulation limiter? How about a swing kit? I have one in my mobile(galaxy) and my wife has the identical radio and setup with out swing kit and mine does get out a bit better. Any advice? Thanks!

>We members of the Wally-Wally Club are anxiously waiting for the
>onslaught of a new batch of hams, licensed and not.

With all due respect, this was an inappropriate post for rec.radio.cb. You have "diss-ed" CB operators by suggesting that people on 11 meters have no operating skills or supposing that no CBers adhere to any kind of behavior standards.

If you really are a licensed ham, you are way out of line to "bait" people to come into the 40 meter band "licensed or not".

>All are welcome to join in the fracus that goes on every day. It used
>to be a LOT wilder but we all have jobs now or have died.

Not quite the whole story, my friend. Actually, your group got the word from Mr. Hollinsworth that this behavior would not be tolerated. Most of them wised up. You are the exception.

When the CB newsgroup needs a lecture from hams, we will ask. We refer you to the charter for rec.radio.cb. It will explain that we already know amplifiers and free banding are illegal. We know not to go into the ham bands without being licensed. We are well aware of the changes in licensing requirements which will soon take effect. Yada Yada Yada.

If you have something positive to contribute, be our guest. But know this. We don't need nor appreciate trolls....especially when they try to start CB vs Ham arguements.

What? Is there a full moon today?

QRM

Dwight let me give you some of the facts that the New Paper did not say correctly.

1.) Me or the other two guys never touched his property.

2.) He did not go get his gun when we arrived he was hiding waiting for us with it.

3.) There was multiple shots aimed toward us but it was dark and he was to drunk to aim his gun. He was using 10 gauge slugs and if it was buck shot I would not be here typing to you.

4.) In New Jersey it is against the law to discharge a fire arm in a residential area. It is even more serious when humans are your target.

5.) Even If I ripped down his antenna and stole his radio he would have went to jail.

The antenna will take any Sane Amp <G> (anything thats not rated in Kwatts)

The Amp/alternator rating depending on how much talking you do and what you have for a battery setup....

With Nothing else on in the truck and a standard battery and not talking alot and on SSB you can get away with several hundered watts.

For alot of talking, a good size amp (500w+) and on AM I would Up the Alternator to as many Amps as will fit the truck and your wallet (150A anyhow) and go with a good Heavy Dual Battery sett up.

You didn't state the Year of the truck, There are a few things you may have to take into account....
Like Electronics, new trucks (and cars) are computer controlled to a large degree. RF may cause trouble there.
(I have seen it do some strange things to computer controlled ignition systems)

And another thing that sometimes gets over looked ..... ABS. It can ruin your day if the ABS system gets messed up.

You might check with a dealer on it too..

Off hand for a general setup.... go with a 250 and dont talk all night long with the lights on <G>

Tam

Your kidding right?

Its a $30 radio that sells for $50. <G>

Its small and fits in a lot of places, that's what sells it.
If it works and people answer you then don't worry about it. Save your $

In your situation the antenna is the most important part.

Tam

Yes, Connect the + of one battery to the - of the other. then you get 24v
from the - on the one battery and the + on the other.
Cheap ASCII art, Sorry <G>

24v here - +_____ - + and here
[_____] wire [_____]

bat1 bat2

Its the same way 2 D Cells work in a flashlight..

As for keeping the batteries charged, you will need a 24v charger(or an
alternator). The Amperage you need will depend on the rating of your
batteries and the load (how many amps you draw)

But then I believe most people use the regulators on alternators that don't
have an internal regulator, thus you
can get what ever voltage you want :-)

Spaming is against the TOC of e-bay.
Politically spam is a touchy thing these days.

Most company cancel first then investigate after.

If there are enough complaints then e-bay will do something.

4308. Engine noise...ARRRRRGH!!

Newsgroup: rec.radio.cb
Date: 2000-01-28 00:00:00 UTC
From: Skimickey <skimickey@bewellnet.com>
Message-ID: <389269b4.0@news.bewellnet.com>
Source record: 22157

Here is a post I got off the Sidekick/Tracker mailing list:

"can anyone help
Ive been trying to hook a cb for a while now and I get some pretty wicked nosie
I've tred everything Ican think of differnt radios, antennas
I think the noise is coming from the fuel pump or something on the same fuse (if Ipull the fuse the noise goes a away and the car dies all at the same time)
the guys at the local cb shop have been working with me on the problem ,but have gave up ..said by a new fuel pump... but a new fuel pump will probaly give me the same noise, and cost 300 bucks
the noise is being picked up by the antenna

if anyone has had the same problem and fixed it please help

thanks rocky"

I too have the SAME problem. I get a LOUD annoying whine through the CB speaker. I've spent hours researching this problem and discussing solutions with many people all to no avail. Is there some inherently noisy electrical gremlin with Suzuki's? In my case, It does not seem to be the fuel pump (turn key one click w/o starting engine and I hear a small whine that stops in a few seconds. That's the fuel pump. When I start the engine, I get a LOUD whine. Probably something else, though I'm not ruling out anything. To date I've tried the following with NO success:

1) Tightened/grounded any and all grounded wires I could find in engine bay.
2) Tightened battery cables.
3) New battery
4) Had alternator tested, tested OK. Checked and retightened connections and ground bolts.
5) New cap/rotor/wires/plugs.
6) Put capacitor on coil from Radio Shack noise suppressor kit. (Radio Shack. You've got questions, that makes two of us.)
7) Tried hooking radio directly to battery.
8) Checked, re-grounded and re-mounted antenna. Definitely grounded.
9) Calibrated SWR.
10) Installed ground braid strap between tailgate and main car body.
11) Drank beer.

Does ANYONE have any additional information? All the leads and help I've gotten so far have gotten me nowhere. Since i tried all the "standard" remedies and nothing worked, it makes me think that there is some inherent wierdness with Sidekicks. So, all you pros out there, whaddya think?

BTW, firestick antenna mounted (bolted, not mag) to spare tire carrier on tailgate. Yes,I know this is not the roof, but with a softop, the fabric is streched OVER the strip of metal (like a rollbar) above the drivers head, so a permanent mount is impractical in order to remove/replace top.

Thanks,

Mickey

Off the subject--kind of--yes, the rf CAN cause computer controlled
electronics
to do some strange things. My wife bought a brand new computer controlled
sewing machine, and whenever I pulled into the driveway while talking w/amp
on--
her sewing machine started sewing all by itself. I still laugh every time I
think
about that. Of course she did NOT think it was very funny!

The MCS2000 is also available in the remainder of the bands as
well as 800/900 mhz.
True to Motorola fashion, they build them first and then design
them in the field.

> LONG LIVE SPECTRA/ASTRO SPECTRA !!!

While I won't say they are the best radio to come along, the MCS2000 is not a bad radio. It still does have a bug in the way it handles a remote head. The "Big M" supposedly is working on the firmware fix for this. Also, OTAR is not the highest on the list of priorities unless you work for the government and even they don't generally use it.
I firmly believe the Spectra and Astro Spectra may well be the best units they have brought out in years. They are still available to government and other law enforcement through Motorola direct.

because the 667 has a driver stage the drive level is low. on the order of 5 watts.
the way there built drive them as low as you can (just enough carrier to pull the relay in)
and allow the radio to "Swing" as it will.

Cheap radio, basically the same as Cherokee CB (model CBS-1000) with a few "Ham" features.
Also sold under the label "Road Force" I forget the model number.

Its modifiable for oob operation as well. (26.165 to 29.695 if memory serves)

They do work, Its no ICOM but then you can get one for about the price of a replacement mike for the icom <G>

I tried one and did make a few qso's on 10 a few weeks back.

: a slight difference. Coax length also changes the Voltage /
: current ratio at the antenna which changes the angle of
: radiation and the lobe sizes.

You did fine until you got to here. As the SWR originates at
the coax/antenna connection - the voltage/current ratio is NOT
going to change with coax length.

Nor does a change in the ratio - if that were possible - affect
the radiation angle or lobe sizes.

: For the third time, see...

: Study the following sites in the order listed. They better
: explain than I...

: http://www.iserv.net/~codyspc/cbindex.htm scroll down to
: antennas
: http://www.pantherco.com/radiorepair/mobile_antenna_fundamentals.htm
: http://www.radioworks.com/nindex.html

Forget all these, and get hold of a copy of one of the Radio Amateur
Antenna books. They give a good basic coverage of such matters.

For real information - go to your local college/university, and find
a text on transmission line theory.

: how much power(linear amp) can i run with out over driving it, thank you
: all for reading,73s

The antenna will handle far more kilowatts of power than you are ever
likely to be able to pump into it. The coax will fail first.

The regulator is designed to regulate alternator voltage, not battery voltage, If you run a 24 volt battery bank the lowest you will be able to run to the amp is around 25 volts with the regulator in the on position. To do what you want to do you would either need 3x6 volt batteries (around 18.9 volts to the amp"minimum") or 2x8 volt batteries to achieve about 16.7 volts to the amp minimum...

Thought one of you guys may want to bid on this.

Forgot what state it's in.

HP 6469C linear, not switch mode power supply, 0-36V @ 300A

It's on eBay and currently at 100 bucks.

Search under 'Test Equipment' for HP6469C

Cheap, if you ask me.

500lb's in weight:-)

I'd buy it, but I'm here and you're there.

Phil / UK

That sounds like a decent set up.

>p.s. can i get away with 300w to 500w? with this set up (batt-alt).

Yes you could, but you would be pulling battery reserve unless you weren't
using anything (i.e. heater, A/C, stereo) else in the car.

Well, we are not in competition with anyone and we do not have any "hidden" costs in anything we sell like a lot of shops do such as Copper and people like that. We are not selling products out of our garage and everything you see listed on our website is in stock, we do not advertise anything we do not have in stock.
These guys that sell stuff out of their garages or homes and barely mark their stuff up above cost, has no overhead. We also guarantee everything we sell for 30 days in shop on top of whatever factory warranty there may be on the product itself.
I think that if you look a bit closer, you will find that our prices are in comparison with most people out there, and our customer satisfaction ranks pretty close to the top if not THE top.
No matter what your prices may be, there is always someone that wants to get you lower than what you are, and most want something for nothing.
We stock over 200 different types of radios, scanners, 10 meter radios, and thousands of antennas. We have 3 Technician benches working all the time and have an incredible sales force.
We take the term CB Shop as an insult, because we classify ourselves as a CB Store. We are not a fly-by-night, garage oriented, home based, portable building sitting by a truck stop opperation. We are one of the largest, well stocked CB Stores in the country and have one hell of a reputation if I must say so myself.
A lot of you out there have done business with us and I am sure they will say the same thing. We have been in business going on 12 years and thrive on honesty and customer satisfaction.
We have over 2500 square feet of opperating room, and provide installations on big rigs, personal vehicles, boats or anything that can be pulled or driven to our shop. We have done work for people like Leanne Rhimes family as well as many others.
We provide our customers with the best atmosphere possible upon arrival to our shop with clean restrooms, pay phone, snack and drink machines, waiting area with color television, truck driver information center, as well as a parking lot that will handle over 15 tractor trailer trucks. Like I said, we are not located at some truck stop in a portable building by a truck stop. We are out to ourselves on the side on the interstate and 6 miles from the nearest truck stop.
We may not be the lowest in price, but we are among the highest in product availability and customer satisfaction.
Thank you for giving me this opportunity to share with everyone what has driven CB City to the ranks that it now stands.

Visit us at cbcity.com. Have a great day!

AMEN!
It ain't how LONG it is, baby!... it's what you plug it into!

Show me a case where Coax length changes the SWR or the radiation efficiency
of single antenna and I'll show you a poorly designed antenna system!

The RS HTX-10 was deliberately constructed so as to make 11 meter mods nigh unto impossible (or at least prohibitively expensive)... No eprom to change, etc, etc... The few attempts I've read of were complete failures.

But it IS a great lil' radio for the price.... they're flyin' off the shelves around here. It's a shame they didn't include CW as a feature, but it'll do FM and splits for 10m repeaters, something the old HTX 100 wouldn't.

Any off the amps can have ssb capabilites in them its up to how you want it done, most non-tech builders just add a ssb delay while some others can add a relay so you have switched ssb then the better builders can have it switched on transmit and bias it for ssb use... Of course the latter will cost a few more sheckels

Dear Ron,

If I'd wanted to pick a fight I would of found someone with more
manners.
>if we wanted to bid on it we'd go there no need to look at it here and
>tie up N.G with idle SHIT like we're doing
I think the gentlemen on this ng know me well enough that I don't throw
spam out their way.

I have also been a contributor to this ng longer than you've been out of
diapers.

Please note, it is not I selling this very nice PSU. I am in the UK, the
supply in Stateside.

It seems you're uninformed as to what some of the people here get up to
in their spare time.

I just thought the spec of this 'linear' power supply would go down well
here.

Many people either do not keep an eye on the auctions for whatever
reason or maybe they just lead busy lives.

I look forward to meeting you in Detroit or Arkansaw later in the year,
NOT.

4373. Re: Engine noise...ARRRRRGH!!

Newsgroup: rec.radio.cb
Date: 2000-01-29 00:00:00 UTC
From: Handy Andy <codyspc@iserv.net>
Message-ID: <z3Fk4.3481$ox5.1050468@tw11.nn.bcandid.com>
Source record: 22222

Greetings!

There are several locations for the noise you're experiencing.

As you may already know, the Fuel Pump is one.

The poor ground offered by the Gas tank and the fuel pump itself, not being grounded anywhere near the tank - adds to the problem

So some tricks I've done to help *LESSEN* the noise may work for you.

I see you've done some work to the grounds at the engine compartment,

However,
Did you use a braided ground strap to replace the short jumper used to ground the engine block to the frame?

The whine comes from the fuel injector[s] in the Throttle Body or multi-
port injection system if you're vehicle has the 2.0 liter option. Adn the
electronic ignition system, for those that have both standard ignition
and the newer electrical ignition system, that offers remote coils located
at the spark plug.

One of the many ideas I've had good results, but not a complete elimination of the problem of noise, was to use star washers on the gas tank to frame mounting. You need, one bolt at a time - just try one first, remove the gas tank mounting bolt, and install a star washer between the hole of the tank and the frame, with the washer sandwiched between the tank and frame - tighten securely.

You may have plastic straps, or a series of straps, the hold the gas tank
in place and a spacer is sandwiched between, then you'll have to use a spare hole for the mounting of a ground braid strap, and route this to the muffler bracket bolt holding the muffler, use the strap and
route it in the most direct means possible. From the tank to the bolt.
A 3/8 bolt, or a 5/16" bolt - simple cap bolts with star washers, can
reduce the noise considerably when the ground braid strap is short and direct to the frame.

A skid plate is also there, use the star washers using the same
techniques
described above about the star washers.

When it warms up around here, and I have some time, I'm going to take a
look under the vehicle and see what else can be done.

Considering it's winter here, it's going to have to wait until June!
;-(

Since bolting to the rool-bar/roof is out of the question, I can't
guarantee results.

I have this problem in a Wrangler. When I first turn the key to on,
I can hear the fuel pump (about 1db). After starting, the fuel
injectors make 3 to 9db of noise. When the weather warms up, I'll
try small ferrites to reduce the noise emissions. Inline capacitors
are out of the question in a fuel injector circuit.

Yea, I am pretty sick of cry babies. Pitty is though, I have no way to filter cry baby out. If I wanted to see cry babies complain, I would go to REC.CRYBABY.IDIOT instead of REC.RADIO.CB.

Sorry, you opened the door, I had to do it.
But realy, many of us welcome seeing items for sale and for auction.
Have a good day.

Yep I'm am proud, but I do admit it's not the right thing to do. The FCC refused to do anything after several repeated complaints. The last straw was directed at my wife. I would have knocked in teeth down his throat but he always put his tail between his legs.

I've got even more paybacks for puke's that I've had to deal with in the past What to hear them, There real good. Really good!!!!!!!!!!!

Remove the bottom cover and locate the black plastic jumper block behind the front panel dis-play. Move the jumper over so it covers the next two pins over, and then re-insert downward. Close the radio up...if you did the mod right the radio will dis-play the frequency 26.000 mhz when you power it up. Runs pretty hot....but other than that it is a great radio. So long.

We're selling our 3 most popular CB books as a special combo on EBAY. Here's your chance to save up to HALF the $80 list price. The books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios by Lou Franklin. List $22. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK by Lou Franklin. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS by Lou Franklin. List $38. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

You can see exactly what these books look like, plus all the specific, chapter-by-chapter details at our Web site:
www.cbcintl.com

Or go directly to the EBAY sale location at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=248804482

Source record: 22238

Panther Company sells a mod for increasing the modulation in the radio. There are two new transistors and a change in the bias of a transistor that provides negative feedback to the AF IC chip. If you don't upgrade the two transistors (Q51 and Q53 I think) at least replace R178 with a 1K Ohm resistor. Then turn up VR14 to exceed 100% modulation. That is all you need.

Let me know if you need further help.

For noise from any electric motor (fuel pump,blower motor,etc.) put a large cap across the leads as close to the motor as possible.A ground connection from the - side of the cap may also be needed.

They were flying off the shelves here until the restructuring,now why
would anybody want a 1 band radio,especially a band thats dead for weeks
at a time?
Too bad,after all these years and poor ham radios RS finally makes a
good one and the ARRL/FCC makes it obsolete before it's 2 months old.

Hay, Friends I didn't come here to argue... life is too
short for that. I came here to help where I can and learn
and make friends.

I have read more books that has sent me on a wild goose
chase than one that pointed me in the direction of success.
There are probably thousands of man hours on here in the
real world of troubling shooting, and not all from books but
word of mouth.

Although most of us have quoted book reference material, I
will take first hand experience advice over books any day.

If it works for you stick with it... I intend to. The ods
are probably greater that we will meet on the air on skip,
using our own methods than ALL agree 100% on ALL theories...
there are just too many real world variables out there that
are not documented.
73's All,
John

Source record: 22276

Don't fall for the power trick...
500 watts is not twice as strong as 250 watts.

Brain cells are not at 100%, but I think this is the way it went.....
To increase signal on the receive end 1s unit (3db) you need to increase the power out by 10x ...

So 4w upped to 40w is 1 S unit 40w to 400w would be 1 more S unit. To get another S unit you need 4000w

By the same token you have 225w so to double the rx (1 S unit) you need 2250w

While going from 225 to 500 will make a difference, don't expect earth shattering things....

Tam

I ran a 2950 30K plus miles in a semi this summer.....it just depends on how
you mount the rig. I installed mine in the dash with plenty of padding.
The mobile mounting bracket beats the poor circut bard to death. I also had
excellent luck with a Emperor TS 5010 in the mobile....but mine was victim
of a house fire and I haven;t been able to find another one.....Tom

1 Grant XL

2 The PC76,78 are AM only,No SSB = less power and less range,not a good thing.Get a Grant.

|Obviously in all my travels to the outer planets the
|language of the planet earth in relation to an obscure
|radio service in the 27 megacycle band changed.
|
|Now I see references to "Power Mikes", "Sliders", "noise
|toys", "ebay", "Roger beep" and of course the strangest one
|of all, a "pill". Now the first one is easy, I see all of
|the muscle magazines that have cropped up on the news
|stand since I've been away and most of the macho guys
|are named "Mike". Is he one of the Village People?
|
|Now "Sliders" has got to be a reference to a television
|show that I saw broadcasting in numerous reruns on my
|return trip from the asteroid belt. Pretty cool stuff
|but there was really no radios in the show. Why do
|these radio users like this strange multi-universe
|television show?
|
|"Noise toy" must be some kind of whoopee cushion that
|radio users sit on to get their antennas higher. I can't
|think of anything else this much reference to. Nothing
|like an old whoopee cushion to break the tension on a
|long space trip.
|
|"ebay"...hmmmmmm thats a pretty strange one...I see
|quite a bit of writings complaining about this
|particular thing. Does this relate to canines of
|some sort?
|
|"Roger Beep" is an easy one. When I left for the outer
|planets it was quite a game to hit anybody named Roger
|in the shoulder and say "Beep Beep", so obviously people
|are still having fun with this great game! Kind of like
|"slug bug".
|
|Now what the hell is a "Pill"?!?!?!?!
|
|Rocket Man
|Collector of Elton John 45 singles.

Actually... I am not sick of "auction" posts... simply because I know how to filter them... however... the newsgroup is more full of sarcastic remarks, or those post from those who like to complain.

Unfortunately, a newsreader cannot tell when a post is going to contain a complaint... sooo, I saw this and replied..

Tam Green wrote in message <870bpm$68j$1@news.ipa.net>...

I HAVE THE SAME PROBLEM WITH A 96 MODEL CHEVROLET TRUCK. I HAVE SEVERAL RADIOS AND A COBRA 20 PLUS KILLS MOST OF THE NOISE. I HAVE A 29 CLASSIC THAT IS AN AWSOME RADIO BUT TOO MUCH NOISE . MY RADIO TECH SAID WE COULD SHIELD THE FUEL PUMP AND PUT SOME KIND OF CAPACITOR IN ON THE POWER SOURCE TO THE PUMP THAT WOULD PROBABLY HELP. I DON'T USE MY RADIO MUCH IN THE TRUCK SO I HAVE NOT DONE YET. I JUST USE THE 29 PLUS THAT HAS BEEN MODIFIED AND IT WORKS FINE

I have a Pierce Sipson Pussycat base in excellent shape. Its a 23 channel base with only a channel knob, volume, squelch, and a meter. Looks like a historic piece of furniture. Transmits and receives great. I also have a Pierce Simpson Simba which is a 23 channel ssb radio. Basically junk. it recieves great but transmitt is not so hot. Do not have origninal mike with it. If it were in excellent shape it would be a nice antique.

> for the consequences.

Consequences? Really? So while you and yours have been
teaching "cw",
everyone else on the planet have been rubbing their hands
together
with great anticipation. OVER HAM ALLOCATIONS! What is wrong
with you?
For the last few years all I've heard is whining over all
those new
codeless people... all WHO? The numbers are pathetic... If
we don't get
some REAL numbers soon... there won't BE any frequencies
left. Look around
you. Look at the malls, all those kids with portable
wireless "things" no
matter how bright or gheeky they are... you see anyone with
a code key? Hmm?
They play with digital equipment like we played with the old
tube things.
Meanwhile more and more pressure is put on the band
allocations. Sigh.. oh
for those days when you could get hot with the gap... spark
gap that is...
Oh? those days are gone eh? obsolete you say... well so is
the "amateur radio,
ham, elmer" or what have you. The days of exciting radio
toys are passing...
fast.
You just wait for the coming bio/nano revolution, it won't
be long now. When
that stuff (FRPG's) goes surplus how you going to keep them

down on the Radio
farm then? Say by-by to all or at least most of the current
seriously under used
frequencies we do have. Then what? Reconstruction's?
Reenactments? Radio models?
I hope you know what the exhibit will say... "CW, the end of
radio as we knew it".

Remember the Dinosaurs.
and,
the "Hams".
Both good examples of the walking dead.

It has already been connected to an external power supply (car battery I think it was)
and that should eliminate the diodes in the power supply as a possible cause, since it still had the hum.

Uhhhhhh Tim, the "consequences" I was talking about referred only
in context to the *consequences for the CW mode*, not the ARS.

I wouldn't try it, it's a tube radio. they are not made for adding channels.

North GA. Buckaroo "223"

4465. FS: Full Coverage (mint) HR-2510

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: gpbrown@aol.com
Message-ID: <20000130100507.26415.00000388@ng-fs1.aol.com>
Source record: 22314

I used the HR-2510 for a few months, then changed cars and it has been in the carton ever since, packed in the original Styrofoam. AM/FM is 10 watts. CW is 25 watts, USB/LSB is 25 watts PEP.
I have been a ham for 38 years, lifetime American Radio Relay League Member and an AOL member for 9. I stand by my word.
The radio has no blemishes or scratches anywhere, on the case or the LCD. Includes mounting bracket, microphone, power cord, and manual. The carton flaps are all intact!
Range: 26.000 to 29.699 Mhz. Audio cap. mod also done by Bud, KC4HGH.
If interested, please send a $254 cashiers check or money order to:
(U.S.-only)

Gary P. Brown K4GPB
206 Preston Pines Drive
Cary, NC 27513

I will ship it out USPS insured the same day your check arrives. (Thanks!)

Maximum legal power is 12 watts and this will get you over a hundred
miles ground wave depending on your antenna of course.

4478. FRS & GMRS radio, which is the best?

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: Frenchy <NoSpamLePhill@knology.net>

Cross-posted to: alabama.birmingham.radio.amateur,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb

I've been looking into getting a 2-way radio. My first decision is between the FRS and GMRS. .5 watts or 3 watts. I'm leaning towards the .5 watts. They are about 100 dollars cheaper, very small, and there are a lot more to choose from.

I plan on using it for rec purposes, boating, carivaning, Disney world, biking, paintball.

Does anyone know one I might want to check out? Or maybe share w/ me some more insight on what to look for?

In my appreciation,
Phill

I've sorta' been following this thread and unless you've already
done so, try this.
Break out your low freq scope and look at the individual audio
amp stages that are in play on tx. See if you can determine where
the hum starts. I mean start right at the mic jack and work your way
back. You might also note if just placing the probe tip on a
particular point in the circuitry stops the oscillation.
I don't remember the schematic of the radio any more but I do
remember one of cobra/unidens little quirks that did this same
thing. If this unit has an audio chip similar to the newer Zach T, I
think a TA7222P on the right side of the radio, remove the little
cap from the heat transfer tab of the IC going to the chassis. I
recall this cap was a major cause of a low freq audio osc. on tx.
Like I said, I don't remember if this radio is using a IC or
discrete pair of transistors.
I don't recall you saying how much hum was present in the tx
audio..10%, 30%, more?
You might even find that the final or driver stages are going
into osc. when tuned a certain way, try nudging the tuning of each
stage slightly and see if the osc changes or goes away.
While I'm in the garage today, Ill pull the Sam's on this rig
and see if there's anything else I can think of. In the meantime
good luck.

I agree, the only variation on this that I have seen that worked well
was a co-phase with 2 ball mount or bumper mounts on each end
of the rear bumper. That did not add directionality, but it did even out
the
coverage and that was what the individual wanted as he had tried
having just one on his bumper and it was severely directional, and
he did not want that.

Is it a 40 ch or a 23 ch? If it is a 23 ch, they are crystal
controlled you need only find the appropriate crystals, and
then add them with a switch to gain all the ch's you want--
as long as you understand that they will need to be checked
with a frequency counter to insure that they are installed
correctly. It is very easy to add crystals, however it is
much more difficult to get them to all operate on freq. You
must pay a lot of attention to the way they are installed. Such as
the length of the wires/legs of the crystals to the switch etc...
I have seen some real butcher jobs that "worked" but were
WAY off frequency. If it is a PLL controlled 40 ch, you
need to know which PLL # and then check to see about
any possible mods, and what they entail.

FRS should suit these purposes very well.

Kenwood's original UBZ-LF14 is one of my two favorites. Excellent performer. CTCSS. Scanning (with Kenwood's speaker/mike. Although only 300mW out - this has not proven to be problematic in my informa testing.

Bill's @-Way has these for only $60.00 each (yellow) or $66. each (black). http://bills2way.com

My other favorite is the Vertex VFX-10. All 14 channels. NOAA Weather freqs, too! Uses DCS encoding - as long as you buy a pair, you can use one of the six DCS codes to "privatize" your comms. The Vertex unit is sleek, sexy, and incredibly easy to use: just a ON/OFF VOLUMS control, and a CHANNEL selector. Couldn't be simpler to use. Built bullet-proof, too. They are closer to $90. each.

Your intended uses indicate you may want to purchase headset speaker mikes. They are available from ADI/Pryme/Premier, as well as the original manufacturers. http//www.adi-radio.com

There's a messageboard entitled "Choices in Personal Communications" that specializes in all options for personal radio comms. It is at http://www.pe.net/~atd/discus/

Hey! Those sound like really good ideas, I e-mailed early on,
and advised to try the battery option to rule out the power supply--or
to pinpoint that as the area to go to. My take on this is that he does not
have
access/knowledge for in depth troubleshooting with O'scopes, or similar
levels of test equipment. But he can certainly check different
mics/connections
and etc... but the last part about the cap is, I think the crux of the
problem, that
is without me actually hearing and seeing what is happening with my O'scope.
(I am lost without my scope!) What seems to me the most likely culprit.

Max watts depends on your radio too (Legality aside)

Range depends on many factors, Almost the Least of them is the
radio....(Antenna, altitude, time of day, propagation conditions (skip) etc)

I have a conversion van also, nothing works well from the roof.
(I also haven't found a no ground that actually works as well as a
comparable conventional antenna)

My Astro has a metal roof, antennas work good on it. The Full-size Chevy has
raised fiberglass roof
and on it I used a side mount antenna. I got a Valor "Sidebody Mount" Its
made of ABS plastic with brass inserts,
Mounts thru a body panel and you attach the coax to studs inside (coax is
not exposed to elements this way)
and screw the antenna into the top of the unit.

I attached it about 3/4 the way up on one side in the back (just behind the
last side window on the passenger side) Used both fiberglass and metal
antennas in it with good results. I am now running a Workman copy of a
Solarcon antenna and a Texas Star 350 on a Uniden HR-2600. (with a
chipswitch chip in it)

I have worked a number of European stations in the morning hours in the past
few weeks. (plenty of other DX too)

It depends on the max range you will need and many other factors.
If you are always going to be within 1/2 mile or less I would go with
the FRS at at .5 watts. If you need real distance, I would go for
a 27Mhz 4 watt CB which costs between $35 and $215.
the lower end being a GE 40 ch and the upper end being
a Cherokee AH100 SSB. As I said, were it me, I would go
with the least amount of money for what I need. If I want to
talk across town, go with the regular CB walkie talkie, if
you are going to be relatively close and don't need the range,
go with the FRS, if you need slightly longer range with not
as much interference, go with the GMRS and you will be
happy, the key is knowing exactly what you will be expecting
from your radios, and how much you are willing to spend to
get the exact performance you desire.

I have run my 2950 in my Suzuki Samurai (4x4) for the last 5 years. I beat the h%$L out of it !!

To prevent trouble I first removed the internal speaker (don't use it anyhow) then cut a chunk of polystyrene (spelling?) foam to fit between the cover and the circuit board, and another slice (much thinner) to fit between the top cover and the board.

The poly foam is the sort that has an oily feel to it (like ABS plastic or a milk jug)
I used it because it does not Crumble like Styrofoam.

4499. FRS 2-ways - TalkAbout, MicroTalk, SporTalk, FreeTalk?

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: Frenchy <NoSpamLePhill@knology.net>
Message-ID: <s990ksv25io125@corp.supernews.com>
Source record: 22348
Cross-posted to: alabama.birmingham.radio.amateur,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb

I'm leaning towards the .5 watt FRS radios.

I've been comparing the different brands. The best ones I've seen so far
are:
http://www.outdoorelectronics.com/sportalk.htm Vertex/Standard HX625
SporTalk
http://www.outdoorelectronics.com/slk.htm Motorola's TalkAbout 250/280
http://store.yahoo.com/barracuda/cobmicii2way.html Cobra MicroTalk II
http://www.familyradios.com/ Kenwood FreeTalk LH

I plan on using it for rec purposes, boating, carivaning, Disney world,
biking, paintball. Range and reception seem to be the biggest issues...

I found this page that seems to have a bunch of reviews:
http://www.gearreview.com/frsreview98.asp

From what I have read the Cobra MicroTalk 3 and Motorola TalkAbout plus 250
are my top two contenders.

Most of the reviews I've found are on the Motorola. If they are really
better than the rest I will get it, but I don't want to buy just the name.
The biggest complaint I found on the Motorola is that it doesn't scan all
the 532(?) channels. I believe the MicroTalk does. But the Mortola seems
more rugged. I'm also looking for possible water resistant if possible.

From what I understand the Vertex has a long good reputation of making
industrial radios. Does there FRS hold up?

If anyone own has an opinion or advice on this please share it w/ me.

In my appreciation,
Phill

Yes it is a good radio, However I tend to keep them out of mobile applications and keep them strictly base only rigs. Ranger RCI's have a bad reputation for cold solder joints and vibration will cause you to find out real quick how bad. There is an 11meter mod for this radio and can be done in a matter of minutes. I dont have a link to one but I'll try to explain this a little.

Remove the bottom cover from the radio, look behind the control unit (Front Face) and you will see a jumper panel with 4 pins on the older 2970's and 3 for the newer ones. Just change the jumper setting for the desired frequency bandwidth you want and then reset the microprocesser (Old 2970's have a reset button behind the face that is white in color, New 2970's you have to turn radio on and of 2 times real quick to reset). Also note that on older 2970's and 2950's there is another jumper that you can change that will re-issue the "Lock" to display the actual CB Channels IE: "1-40" including "A" channels.

i know that some of the pearce simpson radios were made by cybernet.
you can identify these by the PLL02A PLL chip inside.
there may be other manufacturers but this is the only one that i'm sure of.

Band Switch Low= A, B, C
Band Switch High=D, E, F
on your band selector that reads: D/A E/B F/C, these are each 40
channel bands
Switch the "Band High/Low" switch to "LOW" and you get bands "A, B, C"
with the "Band High/Low" in the "High" position, you will get bands
"D, E, F". One of those bands, I think "Band C" are the normal CB
Frequencies or channels.

The Grant XL Is a AM/SSB Radio as to the 76XL only has AM.
If you are looking for a radio with sideband and that can be pumped up
and modded, go for the Grant XL, if you just want a regular radio that
you dont want anything done to and dont care for sideband, go for the
76XL...

go back to radio shack and DON'T ask them ANY questions!!!
just pick up a feed through capacitor and install it as close to the fuel pump
as possible in the B+ line. there's only 3 connections on it. the directions
are on the back of the package and you can't go wrong.
be sure that you don't install it in the computer feed back line though.
depending on the brand of car that you have, checking it with a volt meter
might also show you 12 VDC. if you put it in that line, it won't do you any
good.
it worked for me on 2 ford tempo's.
good luck.

<OR A GOOD SCREW FROM HIS MOTHER>

you know, i've found that there are a few hams out there that make the rest of the ham community really look bad.

(KB9JBL)

several months ago, i was having an on-going war with some of them over a matter of phylosophy concerning ham vs out-banders and other subjects.
when it was waranted, my words were very harsh but only when i was attacked with the same attitude.
the funny thing about it is that i also met some hams that, although they didn't agree with my point of view, were able to communicate on a mature level.
by the same token, i was also able to get down in the mud with them and play dirty when needed.
what i have learned out of all of this is that a few bad apples don't always spoil the whole barrel IF you sort through the rest of that barrel and look for the good ones.
the way it was several months ago, if i re-read this post later on, i would have probably denied writing it.
i did sort through the barrel and found a few good apples though.
good night.

250watts=close to 7.5db gain
500watts=close to 10db gain

You get your most increase of db gain from your first 100 watts
100watts=6db gain
each additional 100 watts after 100=1db gain
each 1,000watts after the first 1,000watts=1db gain
So if you run 2500watts, you would get about 30db gain and so on.
That help?

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: pll02a@aol.com
Message-ID: <20000129233808.23197.00000627@ng-ch1.aol.com>
Source record: 22373

the best way that i've found to co-phase a pair of antennas is to go to rad shack and get a female to female so-239 connector and a 5 watt dummy load. connect the dummy load to 1 end of the coax and tune the other antenna. when you get the first one right, connect the dummy load to the other end of the coax and tune the 2nd antenna. you may have to go back and check both antennas a couple of times and fine tune but, in the end, the trouble is well worth it.

this way, you have the antennas AND coax that you're going to be using tuned to the vehicle. you'll also be tuning each antenna against a true 50 ohm load on the other end of the coax which is what you're trying to do anyway.

if you try to tune the antennas one at a time using a piece of 50 ohm coax, when you hook up the 75 ohm co-phase harnass, the system tuning will go right out the window unless you get lucky not to mention the fact that you'll have to string your coax only once as opposed to stringing the co-phase harnass and fooling around with an extra piece of 50 ohm coax that you won't even be using in the end.
good luck.

>cb
>radio group

i said this several months ago and was ducking rocks for months.
i suggest you keep your head down. :)

it seems that some of the ham community is board with their commrads on the
other news groups and come here to stir shit up about our operating practices.

i don't know but if they were to ride into the ham NG's on their high horses
and try to dictate to those people there, the way they do here, i would bet
they would be told to eat shit and have their horses shot out from under them
as i have done in the past here.

i know it's hard to ignore them but i have learned that if we do ignore them,
maybe some day, they'll go away.
good luck.

here's a N.Y. grand slam.
we used to do this with the tall glass bottles but i haven't tried it with the new plastic bottles, (i quit drinking 15 years ago).

take a 20 ounce bottle of WARM coke.

drink or pour out 6 ounces.

refill with your favorite brand of 151 proof rum.

SLOWLY tip the bottle up keeping your tongue tightly over the top of the bottle as to not drink it yet.

when you feel the compairatively cool coke hit your tongue, tip the bottle upright and back up side down FAST and let it fly down your throat.

if you don't inhale it and it doesn't come out your nose, it WILL F%&* you up.

the idea behind the warm coke is that cold coke doesn't fiz as much and the warm coke, (with the rum), will enter your system faster.

if you drink 2 of these within a 1/2 hour period, it would be wise to have a designated breather nearby. :)
be careful.

This message was posted anonymously:

Obviously in all my travels to the outer planets the language of the planet earth in relation to an obscure radio service in the 27 megacycle band changed.

Now I see references to "Power Mikes", "Sliders", "noise toys", "ebay", "Roger beep" and of course the strangest one of all, a "pill". Now the first one is easy, I see all of the muscle magazines that have cropped up on the news stand since I've been away and most of the macho guys are named "Mike". Is he one of the Village People?

Now "Sliders" has got to be a reference to a television show that I saw broadcasting in numerous reruns on my return trip from the asteroid belt. Pretty cool stuff but there was really no radios in the show. Why do these radio users like this strange multi-universe television show?

"Noise toy" must be some kind of whoopee cushion that radio users sit on to get their antennas higher. I can't think of anything else this much reference to. Nothing like an old whoopee cushion to break the tension on a long space trip.

"ebay"...hmmmmmm thats a pretty strange one...I see quite a bit of writings complaining about this particular thing. Does this relate to canines of some sort?

"Roger Beep" is an easy one. When I left for the outer planets it was quite a game to hit anybody named Roger in the shoulder and say "Beep Beep", so obviously people are still having fun with this great game! Kind of like "slug bug".

Now what the hell is a "Pill"?!?!?!?!

The Pearce-Simpson I have has a built in FM radio in it with a standby mode so that if you are truckin' down the road you can jam to your favorite station and if someone breaks on the channel you are on, the radio will cease and let the breaker through. Was able to get this thing to deadkey 2 and swing 13. Anyhow, on the back of the unit, it states "manufactured for Sears-Roebuck". The radio also accepts a 7 pin right-angle plug which I have been unable to locate, so the stock mic remains.

Yeah, Maybe I should have mentioned that. The mobile mounting bracket
that comes with the radio is the leading cause of the damage! Thanks
for reminding me of that.

Best place to find a mic plug for it is at a Ham Radio store or get a
catalog from AES: http://www.aesham.com There are several others that
sell these items to help with your mic plug....

Legally you can put out only 12 watts max. Illegally it is unlimited.

You can talk across the country with a stock radio on SSB. 125 watts
will just make your signal stronger and get over the rif raf on the
channels.

125 watts is great to start with, but try and concentrate on your
antenna and feedline.

Well like most radio op's would say... "then leave. Turn your unit off and
don't come back!" If it (posting of eBay listings) does irritate the
individual, why in the hell does he come back (to the NG) for more?
[curious]

I had problems with a neighbor who bought junk stereo equipment. Because of this, I limited my radio's output to 8 watts PEP on SSB and still made frequent contacts across the country and a few across the Atlantic. Ofcourse my antenna was 60 feet to the base which would make the tip around 82'.

I own both the HTX-10 and the Eagle 400. I bought the 400 off the rec.radio.cb newsgroup for 100 dollars and it was a good buy just need to be aligned although the frequency control is channelized and misses a few fequencies. I get good reports on audio.
I bought the HTX-10 last month and it does a great job on ten meters with many compliments. No "skips of frequencies here! Only problem is that you can fry an egg on the heat sink while on FM. I'm adding a DC brushless fan to the rig.

Yes, Sunny it is! The reason why: It is Manufactured by COMMUNISTS in RED COMMUNIST CHINA, where everyone gets paid the same & the govt. gets paid the most to make junk. They also will be selling a noose to hang US with soon! Remember UNcle Krushchev said back in the early days of CB in 1960 "WE WILL BURY YOU" (with JUNK CB's made from our slave labor camp compounds in COMMUNIST countries). Will we sell them to noose to hang US with? Bill clinton says YES I will !!!!!!! DO NOT buy ANY RADIO made in CHINA!!!!!! Dave!!!!!!

If the noise changes in pitch with engine speed it is the alternator. This may be an indication of a bad alternator or you may need a filter mounted at the alternator.

What about the new Midland 79-290 which got a very good review in the Feb issue of Pop Comm--anybody had experience with one? I've seen them mailorder for under $200.

Greetings!

On Sun, 30 Jan 2000 01:32:40 GMT, while the modem was pondering it's
navel, Tom Rowan <trowan@bellatlantic.net> dissertated the following:

>Does anyone know how to turn down the power & audio on this radio ??
>

Why?

What seems to be the problem?

Most people that ask about the Midland 115, usually want the audio and
power increased.

You have a Mic Gain control on the front, did you try it?

To reduce power, you adjust [spread apart or compress the] coil L305
and L307.

Hope this helps.

Regards! |

>power and/or REAL antennas (not graphite rods), these phones have a jack for
>hooking up a 3 DB gain antenna.

Motorola "brick" and Classic phones are often available for $10 or less
at stores that deal with used stuff around here (e.g. Value Village)
and flea markets. On these phones, the antenna connector is actualy
a male SMA, so it's easy to connect an external antenna. Bag phones
are larger and heavier (mostly the lead-acid battery) but have 3 W
output power instead of 0.6 W. The antenna connector is a TNC.

With both of these, consider building and carrying a Yagi gain antenna
as well as a rubber one. A 1-meter-long Yagi at 824 MHz should be able
to give you 12 dB of gain, which is quite a substantial range gain.
Such an antenna could be built to be taken apart for transport,
with all the parts except the driven element fitting inside the boom.

In an emergency, you would take out the antenna parts, connect the
driven element to the boom (it could be built so this is done with
a single screw or wingnut), and insert the rest of the elements
through holes in the boom. The elements go in in order of decreasing
length, so it's easy to figure out which one goes where without
special markings. If you use rubber grommets in the holes in the
boom, the elements should stay in place from friction. Then connect
the cellphone and simply aim the antenna at the horizon, rotating
yourself around until the cellphone picks up a signal.

4600. Antenna Question

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: lfa2@webtv.net
Message-ID: <29967-3894E2F7-71@storefull-232.iap.bryant.webtv.net>
Source record: 22449

As I stated previously, I cannot put up an outdoor antenna due to deed restrictions. I am considering a Firestik Indoor base antenna but was wondering: I have a long attic about 50 feet but there is only about 4 feet of overhead clearance. Would it be a waste of time to put an Antron 99 up there laying flat (horizontal I guess) or would I be better trying something else. Any help is appreciated!

lfa2

4601. Re: best cb (79-290)

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC

Source record: 22450

I just bought a MIdland 79-290 last month. The radio has a lot of great features, excellent audio and good power output. The only thing I don't like about the 79-290 is the receiver. It doesn't pull in the low signals as good as my Eagle SIdewinders, and the noise blanker isn't that effective. Other than that the 79-290 is a good radio.

4602. FS***SECRET CB BOOK SET $200.00***

Suggesting the use of CB for cross-town communication (with hand-held
radios, no less!) is not a very reliable idea. The last time I tried

this on CB (in the L.A. area in the mid 70's) it was S9+ noise (QRM, QRN and heterodynes) all the time, and from what I've heard, it's only gotten worse. A four watt handheld might be good for a couple of blocks though... FRS is much more effective for what you want to accomplish.

4605. Palomar 350 Deluxe Gold Face?

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: Michael Willey <photog101@mailhost.det.ameritech.net>
Message-ID: <3894EA29.BAB9341E@mailhost.det.ameritech.net>
Source record: 22454

I have just acquired a Palomar 350 Deluxe (automatic side band) Gold Face that seemed to have a problem with the former owner. I have opened it up and find that the trace in the very center of the board has a break in it. I am wondering if there is a simple way to repair this without having to replace the board.
Seems that it would only work on the lo power without causing distortion in the modulation. The recv. amp worked well.
This box has 4 MRF 455's in it (and the break is in the middle of thses) and without documentation I think that it requires 35 AMPs of 12volt power. If I am wrong on this point, please inform me before I string in the power source for the box.
Thanx in advance:
M:)

Hello everyone... A newcomer to the CB world here.. I recently heard about SSB.. although I heard that the sound quality is pretty bad.. is that true ??
the second question is.. what would be the better CB for it ?? 1) a Cobra 148 with the NW and the new sniose sliencer.. 2) Midland 77-290 or the 3) Uniden Grant LT .. What are the options ???
Thanks for the responses

Source record: 22461

When you remove the head liner to install the mount for the roof mount, take a piece of wire 18' long solder or bolt it to the mount and the shield of the coax, 9' either way. duct tape this to the inside roof of the van, reinstall the headliner and tune your antenna for the where you plan to talk on it. for safe measures check your SWR before you put the headliner back in. you can give the antenna a counterpoise like this to achieve a good match, sometimes it takes some "tweaking" with the placement of the wire. Also if this will not give you a perfect match but will give you an acceptable match you can get the SWR down really low using an inductance matching network. This would consist of a piece of solid copper wire (around #12 gauge) coiled around something like a D cell battery. try 6 turns first and then use less turns till you see the best match. The way to do this is to hook one end of the coil you have made to the center of the coax and the other end to ground, this will be a direct short but believe me it will work, play with the size of the coil and the amount of turns to achieve the best match.....
Good luck and I hope this is not to confusing...

Its supposed to be SSB ready (auto SSB, Personally don't like auto SSB)

Try it and let us all know <G>

As for comments, locally they sell for $110.00
So as long as you don't expect Top O' the line performance I guess there ok
:)

You could rry a power filter in the cord (not ideal but better than nothing)

There are some small ones that could mount on the back of the radio or even
inside the radio.
(if its not one of the REAL small radios)

Tam

Well as long as you don't have metal roofing (or a lot of metal in the attic
it will "work")

But.....

A) You will be "On the flat side" (Horizontal polarized)

B) Your Signal will be directionally oriented along the broadside of the
antenna (basically a one element beam)

As to the Firesitck base being better or not... Thats a good question. the
range of them inside is not that good.
How much higher would the A99 be?

Here is an idea (Actually did this once)

We had an unused chimmny on the house, slid the antenna DOWN inside it!!
Placed a broom sick across the top and tied the top of the antenna to it.
Ran the coax out the bottom (where the stove pipe would have gone)

Worked Great !!

The Voice on SSB takes some getting used to....
You have to tune the voice in or it sounds like "Donald Duck" or high pitched etc.
(The majority of HF Ham communication is done on SSB)

SSB is better for communication than AM due to the narrower bandwidth (1/3) and the suppression of the
carrier and other sideband gives you an effective 2/3 more power and greater range.

Also better for "Shooting" skip ;-)

As for radios Personally I like the Grant over the Cobra (except for the placement of the mike plug)
But if you are going to get REALLY into it, there are a lot of radios out there that offer some useful features.

From: Tam Green <tamarack@ipa.net>
Message-ID: <873036dpv1@news.ipa.net>
Source record: 22477

WARNING I am working without a net here (going from memory) so may not be 100%

The conversion (if its an older one) on it should be the same as on the Cherokee CBS-1000.

Unplug radio
On the inside behind the fq display there are 2 jumpers pins. if there jumped open them if not jump them
(I cant remember what is the default)
Plug in and press the second button in the LEFT column when you power it up (the one under the Func button)
Your display will be blank till you release the button. and it will be your "Band" switch (bands A to J)

OR if Its the newer design...

Look inside at the board behind the display, you will see the CPU chip (like a postage stamp with lots of legs)
to the left and a bit below there will be a double row of contacts, on the last 2 (to the left) there is either a glass diode that has been cut and re-soldered or a silver jumper (heat it a bit and separate the leads.)
There may also be a GREEN Jumper wire DON'T cut it.

ABOVE this there is a set of 6 empty contacts (2 rows of 3) to the right is an electrolytic capacitor.
With the Radio still unpluged short the set of pins closest to the cap this is the cpu reset)
On power up press the Fucn button then press and hold the second button down in the RIGHT column
(this is the next button below and to the right of the Func button) HOLD it for about 3 sec..

This will give you the expanded mode.

Also after this is done repeating the process switches back to the "Ham" mode.
if you Press FCN and then the other button just for a moment (don't hold for 3 sec)
it will toggle you from FQ display to channel display. and vis a vis.

Hope this helps..

Tam

I am a trucker and have my 79-290 in my truck. It has been modified for the extra channels and I have used it to talk long distance on SSB when at truck stops. I also like to use it in the LOC mode as it filters out all the BS you here on CH 19 when I am driving and I get only the ones close by I need to hear. I also have a LA 225 hooked up with it for times needing the extra power to talk on those long DX. I enjoy it as a great radio.

> I just bought a MIdland 79-290 last month. The radio has a lot of great

4634. Question regarding antenna and range

Newsgroup: rec.radio.cb
Date: 2000-01-30 00:00:00 UTC
From: Johan Delport <j.delport@worldnet.att.net>
Message-ID: <8736ffsug1@bgtnsc03.worldnet.att.net>
Source record: 22483

I am new to the CB world, so forgive me if the question sounds stupid (I am also still busy reading up on and understanding the theory behind CB radios). I have bought two GE handheld CB units, and they are pretty good up to a range of about 1/2 mile. I understand this limited range is mainly because of the small flex antennas. The unit have the FCC max output of 4 watts. My question is: if I use the unit in the car with an external antenna (e.g. mag mount), how far would the range extend? The units have an external antenna jack. Would I be able to talk with someone with a base station over a 10 mile range? Any advice on the external antenna?

Any help appreciated.

-Johan

4635. Re: Engine noise...ARRRRRGH!!

Newsgroup: rec.radio.cb

Source record: 22484

Thanks for the response,

Yep, I tried my other radio in my Suzuki with the same results, lots of noise. The other radio is a different brand and is absolutely silent in my other car, so it definitely is a car problem. I am looking to purchase a Grant, though. One question, because they are so good at rejecting this type of noise, does this affect their transmit/receive capability? In my mind they are related i.e. because I get so much interference my range is limited. If the unit were to compensate for all this noise, could it still broadcast "through" it?

Thanks,

Mickey

well at 90 amps you have 1260 of input watts and 14 volts - so a 630 watt amp would be your highest best bet - and that antenna well it can handle a lot more than that - its coax you need to be worried about when it comes to power

Greetings!

Er, no...Robyn...

Bought one that had the PLL02A...and tricked/butchered for the
oddballs...

Didn't hold onto it for long afterwards...

Discontinued the tubes [back then] for it - so I gave up on trying to
hold onto it. It had weak tubes but a very unique Hybrid design of IC,
Discrete Solid state, and an AF/IF/RF amp section using tubes.

Performance from the butcher job was poor, more of a novelty and made
a great coffee warmer...

Two guys were sitting on a park bench. One turned to the other and
asked, "Are you a Liberal or a Conservative?"

"I'm a Conservative," the other man proudly replied.

"Why are you a Conservative?" the first man asked.

"Because my father was a Conservative, and so were my grandfather, my
great grandfather, and his father before him," replied the other man.

"What if your father was a jackass, and so were your grandfather, your
great grandfather, and his father before him?" persisted the first
man. "What would you be then?"

The first man thought for a moment, then replied, "A Liberal."

Would it be a waste of time to put an
Antron 99 up there laying flat (horizontal I guess) or would I be
better trying something else? Any help is appreciated!

Lloyd...
If you put an Antron 99 horizontal you'll lose 20-30db of signal with
those close-by who are all running vertical polarization. You may still be
able to work some skip with that set-up though (polarization makes far less
difference once you start bouncing your signal off the ionosphere).
Since I assume you're interested in yakkin' with the local crowd, you'd
be better off putting whatever vertical you can in your attic or hang it
upside down from your ceiling. Install a decent 'ground plane' for the
antenna by running several (5 or more) 103" wire radials from the shield
connection at the antenna base... lay 'em across the rafters in the attic
(tape up the extreme ends). It'll make for a decent compromise antenna
system.

It only sounds 'Donald Duckish' if you're a bit off frequency (or have a slightly unstable reciever) or using filters that are too narrow for voice fidelity.

>(The majority of HF Ham communication is done on SSB)

And most, I might add, have great audio too.

Did you ever offer to install torroids on his speaker wiring? (or give him the torroids to do the job?) It's actually quite easy to rid a stereo system of RFI problems.

> COMMUNIST CHINA,

The Chinese got the jobs because they were offered them by AMERICAN companies--your fellow AMERICANS. Folks in the USA have developed a Walmart mentality where they expect everything to be inexpensive... really inexpensive. North American businesses can't hire Yankee labor to make stuff because the product will then be too expensive to sell to Americans. It's a 'transfer of power' kind of thing, and it's a bummer because Chinese will be a real difficult language for the next generations to learn unless they get smarter than this one.

On a base station, YES. leave it hooked-up all of the time so you can
constantly monitor the operation of your station. On a mobile, it's a
toss-up.

I once had a home made dipole in the attic, ran along the beams, in an inverted V and I worked Europe just fine with it. Another consideration is the antenna set up I use now. I have a 102" steel whip, at ground level with two copper wire radials running at 90 degree angles and I work all over the US, South America and Europe with it. It you have room for 4 radials, that's even better, but they all have to be lying in a straight line on the ground, at 90 degree angles from each other. You start the copper wires at 102" each and trim each evenly until you get a good SWR.

This antenna is only 8 1/2 feet tall and isn't even noticable. You will need some sort of base to screw the 102" whip into. I use a trunk lip mount. You also need some way to keep the 102" whip from falling over. Mine leans against a fence, pretty straight up...

I'm in about the same situation. I have a 4' fiberglass whip (with just barely enough room to stand up) with 4 102" ground plane radials spread out horizontally. Gets me 5-7 miles to mobile radios, 10-15 to bases in the area. There's probably better solution out there, I just haven't gotten around to looking at it yet.

Try the inverted dipole mentioned in another response, see how that works. Also, browse through the arrl antenna handbook and see if there's anything else in there that'll fit. (Yeah, I need to take my own advice and do this too. But I'm already accustomed to my base being my "little" radio.)

Good luck!
dirk

>
> Curt Breneman
> KC2EBP

I'd have to agree that cb's aren't very good for this situation. I
question their ability to reach across any but the smallest towns, and
that's only with a large antenna. With a 4+ foot telescoping antenna,
maybe it's possible (enough to be reliable even) but that would be
harsh on his paintball, moutain biking, and disney world experiences.
And with both cb's having rubber ducky antennas, the range would
probably be equal or less than the frs! I had one once, wasn't
impressed, maybe they've gotten better, but I doubt it.
Plus handheld cb's are pretty useless indoors, due to their low
frequency and the fact that they are A.M., meaning they're much more
susceptible to interference.

I'd say no to the cb (for this purpose, not as a hobby).
Good luck

Don't bother if your handheld does not have a noise blanker function.
Without it you would receive to much ignition noise to make it usable.

The point is, why learn from misinformation, when there is plenty of accurate technical information available? If you are reading books that don't agree on antenna/transmission line theory, then you are simply reading the wrong books. And, theory works just fine in practice-- if you understand what you have read. You can' get much more practical than the ARRL publications.

Actually, it looks like the trace has seperated and lifted from the
board and the solder has cracked. Weirdest thing that I have seem
inside an electronic component.
I don't see any burn marks in or around the solder or the trace.
Thanks for the idea that one of the finals are shorted out, time to
take a check on that.

I know what you mean as to restrictions as I live on the top floor (3rd) of a downtown apartment and can't have an external antenna (I'm still trying to convince them that I could put an antenna on the roof without putting any holes in the 100 year old building) so I have a Firestik Indoor Base antenna, and a RS CB/10 meter mag mount (on my refrigerator!) and surprisingly the RS mag mount works as good and sometimes better than the Firestik. I talked to a guy that is about 20 miles away with the mag mount on my old Johnson 124 - M and couldn't believe it!

As I said, you can always go with the SSB. The range is increased
by a very large amount, and the noise is cut by a nearly equal amount.
Concerning the size of the town (NOT CITY) I do not consider L.A.
to be a "Town" if you DO then I NEVER want to see your idea of a city.
Also, you must have completely ignored my very first statement---
"> > It depends on the max range you will need and many other factors."
heavy emphasis on MANY OTHER FACTORS .
FRS is fine for close, clear, fairly reliable communications within it's
limitations.

I agree you are not going to talk as far as if you had a mobile or base
CB, but I have had good luck talking "across town" and actually have talked
MUCH farther when conditions are optimal. I also think that you either
missed or ignored my very first statement that there are Many Factors to
consider--
such as terrain, elavation, intervening objects, level that skip is running,
local
noise levels etc... I didn't want to write a novel, just make a comment
based on my
own experience. Also, while SSB is AM, it offers a number of advantages
you seem to have ignored--mainly the greatly increased range due to MANY
FACTORS--or do you want me to list them?

YUP! I have broken several, but I just went out and bought new ones
because it did not happen while just driving down the highway, I was out
4 wheeling. I just figured that it was the price of having fun and doing
what I wanted--and using it in an enviornment it was never designed for.

Good to hear, I was just wondering if you are running SSB?
If you are, how are the audio reports (quality vs. quantity) as
this is my most important priority.

I once remember turning down the audio and power until I was putting out
approximately 1/4 watt and that was what the contact I had said sounded best
on his end. He was about 15 miles away.

Looking for 1950s/1960s vintage Raytheon CB radios and
CB walkie-talkies for private collection. Interested
in all models except TWR-2 (I have a real nice one).
Prefer clean, working units without modifications.
Also interested in owner's manuals and shop manuals
on Raytheon CB equipment.

Thanks and 73,
Dean / K5DH

I don't get up that way much anymore, as I live in Olympia, and I am not in the Nat'l Guard anymore. We were always going to the Yakima Firing Center for drills, and I always signed up for extra duty. But if you run down south, give me a holler on 17, or 3 as I monitor those most of the time Oh, by the way, the handle is HatTrick.

Noise in the reciever and your ability to transmit are unrelated,also it
is common to have a sensitive reciever thet can reject unwanted signals.

Don't cloak yourself in fake mystery.

What are the implications?

They are:

ONE single message, EIGHT newsgroup flags attached to it.

I don't assume, these are unspeakable implications. Or did you really
believe, that a message posted to eight newsgroups criss crosses the
internet as EIGHT individual messages, consuming eight times the
bandwidth? The designers of internet had more brains than that.
Though you can read the message in eight groups, it only exists ONCE.

Be careful using the ARRL books. They have a lot of typos in them espcially in
there formulas. Make sure the formula they give jives with the example solution
if there is one.

Its funny. In most cases, when ever I talk to any one with little or no true experience on ebay I hear the following.
Qoute: I would never sell any thing on ebay, because my items would go to cheap!
Or, I would never buy any thing on ebay, because the items I want would sell to high.
The reality, not my opinion, but a reality that proves its self every day is, eBay provides a very good representation of what a item is truly worth, world wide.For
everything, not just cb's.
As far as posting items on this ng for auction. It only offends those, who fear missing the opportunity to take advantage of a less than knowledgeable seller.

For a local vertical you could put you about a 5 ft top loaded antenna on the vent pipe, hopefully there is one on the backside of your hpuse and string 4 radials from the bottom of the antenna. Naturally you could use a taller antenna if it can't be seen from the front. The attic would be a good place to string a dipole and I have used aluminum ridge vent for an antenna. You can also put something like the Antron in a fiberglass flag pole if one is allowed. Also consider getting a ham license. In someplaces local covenants do not apply to hams. Oh yeah, sometimes you can hide an inverted V antenna under the gable end of your house or hide an antenna in a tree.

Greetings!

If all you do is run low poer, and in stock or plain CB radios, a
SWR/Power meter doesn't have to be left in line all the time for
mobile use.

In fact, it can be more distracting than what you want to deal with...

As far as Base? Well, an SWR meter hooked up all the time would help
especially when weather conditions change or you're getting complaints
about bleedover. You can get an instant condition of your setup from
the SWR meter on up to the antenna.

Power? Well, it doesn't really matter - especially on the older Analog
S/RF radio meters, at least you can see when you're modulating.

I have to say remove the meter if on a base station. I have run
across too many meters that were, by design, creating harmonics and
causing tvi/rfi.
By virtue of the simple, least parts designs of today's meters
it is very easy to transmit an unacceptable level of harmonics. The
rectifier diode circuits in these can generate the harmonics just by
being in the circuit. To design a better circuit would require
several diodes in a harmonic canceling arrangement. At least the
even harmonics would be reduced or eliminated.
There may be some meters out there that are designed to prevent
harmonic generation but I'm personally not aware of the newer units
or their designs.

I must have had the luck because I ran one in my truck for about a year and about 250k miles. The only problem I had was the TO220 package regulator broke one of its legs free from the pcb. A five minute job to fix on the road and I was off and running again.

From Montana I have worked Japan,australia,S. Korea.On the most
similar ham band (10) I have worked over 200 countries on low power.It
is easier on 10 because more foriegn stations speak english and CB is
not popular (or even known) in many countries.

Looks and sounds like a Mongoose to me.... (mongoose 450 ?)
The Gold Trim always was poorly applied,smuges too easy, is pucked and wears off after just a short while. The Black faced version wears better.
Not just your radio, its all of them.....

The radios were OK for the money (about the same cost as a cobra 129)

I did a whois on the addy and got nothing
(The FCC Web site http://www.fcc.gov/contact.html does not list that as one of there addresses)

I did not see the auction item, but.....
I did look the rules up.

97.315 is Certification of external RF power amplifiers. (NOTE #4 and #5 below)

(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see Sec. 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with subpart J of part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or

[[Page 607]]

(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.

NOTE This PART !!!!

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

97.317 is Standards for getting certification of external RF power amplifiers in case anyone wants to <G>.

I also did not see anything about "MARS mods" the common loop-hole commercial amps use to cover
there conversion to work on 10m..

As I read the law, It is not against the law to sell ham amps, To a dealer or to a ham. The RULE did not
state that you have to see proof (at least not where I can see) that the Purchaser was a ham.
I would take there word for it, after all they wouldn't lie.....

I must say they have tightened the laws up somewhat over the years. I see several old (and one new) loop-hole that are closed now. (in 97.317)

I Bet its a used amp anyhow <G>

I dont have the magnum mod handy...

You have to remove a SMD on the front panel (only have to take off the
cover to get at it)
I just dont rememer what one....

If you dont get it email me and I will send you the info.

BTW I liked the radio ;-)

I intend to purchase a UHF TX 6000 for 4WDing use.
Does anyone have any experience with this unit -good, bad or
indifferent?
Any suggestions for an alternative -must be handheld.

Where should I buy? Melbourne area.

Your thoughts are appreciated.
Cheers,
Sean Brown
